## **ABOUT NUS HIGH SCHOOL**

The NUS High School of Mathematics and Science is an independent, specialised co-educational school that offers its own six-year diploma programme. Established in 2005 by the Ministry of Education, Singapore (MOE) and the National University of Singapore (NUS), the school offers a rich and broad-based curriculum in mathematics, the sciences, humanities, the languages and the arts. The specialised math and science curriculum is underpinned by creative teaching to inspire and challenge talented young minds who are passionate in these disciplines. The school's keystone programme for research, innovation and enterprise, the Da Vinci Programme, complements these specialisms. Apart from promoting interdisciplinary learning, the Programme provides the opportunity for students to undertake authentic research under the guidance of researchers from tertiary institutions and research institutes. The school's affective and character education programme is responsible for developing socially responsible leaders who are committed to contribute towards the betterment of society. The school's curriculum is accredited by MOE and NUS. Upon successful completion of the six-year programme, students graduate with the NUS High School Diploma. The Diploma is recognised by local and renowned overseas universities.

### Our Mission

To inspire and shape the future of education in mathematics and science.

### Our Vision

Future-ready Pioneers, Humanitarians and Innovators for the world.

## ACADEMIC PROGRAMME OF STUDIES

The Academic Programme of Studies is the prescribed syllabus at every stage of NUS High School curriculum. It outlines the curriculum structure, modular system, grading system as well as promotion and graduation requirements. It will be updated regularly to reflect all academic modules that are offered to the Class of 2021.

### 1. Curriculum Structure

NUS High School designs and implements a unique curriculum that is relevant, deep, rigorous and inspiring to students who have the aptitude in and passion for Math and Science. The NUS High School curriculum allows students to have more flexibility for deeper exploration in their learning as they move up from the Foundation Years to the Specialisation Years.

<b>Foundation Years</b>	Years 1 - 3	Students will acquire the fundamentals and build their base knowledge. They will have the opportunity to enhance and apply their knowledge.
<b>Specialisation Years</b>	Years 4 - 6	Students will be engaged in doing advanced courses in their areas of specialisation.

#### 1.1 Modular System

The NUS High School curriculum is based on a modular system. The school offers our students a diverse spectrum of courses and enriches them through our multidisciplinary approach. It also provides the rigour and depth of curriculum while allowing flexibility and breadth to the learning so that students can develop to their full potential. Students can progress at their own pace and choose from a wide range of modules.

##### 1.1.1 Types of Modules

<b>CORE</b>	Essential modules with the core knowledge and skills expected of a student majoring in the discipline at the high school level in all academic subjects other than Mother Tongue.
<b>ELECTIVE</b>	Modules that build on the Core modules to give greater depth and deeper understanding to students for the subject. It provides flexibility of choice with further different focus within the discipline. It is not compulsory to take elective modules.
<b>ENRICHMENT</b>	Modules that are offered to students who wish to broaden their interest. It is not compulsory to take enrichment modules.
<b>HONOURS</b>	Honours modules are advanced modules designed at university undergraduate level for students specifically reading Mathematics or Science subject at Major with Honours level. Honours modules are offered in Years 5 and 6. It is not compulsory to take Honours modules.
<b>MOTHER TONGUE LANGUAGE CORE</b>	Essential Mother Tongue modules with the core knowledge and skills expected of a student at the pre-tertiary level. The modules follow the GCE 'O' or 'A' level syllabus.

### 1.1.2 Module Codes

Each module of study has a unique module code consisting of a two-letter prefix and four digits:

- First two letters: Subject code that denotes the discipline (see List of Subject Codes)
- The first digit indicates the academic level of module offered.
- The second digit is used to indicate the type of module: 1 for **Core**, 2 for **Elective**, 3 for **Enrichment**, 4 for **Honours** and 5 for **Mother Tongue Language Core** modules which follow the MOE syllabus.
- The last two digits indicate the module number.

For some modules, there is a suffix letter.

- A letter 'A' indicates that the module is a preclusion and taken in lieu of the core module, with different assessment weighting.
- A letter 'M' indicates an approved Mother Tongue Language in-lieu module conducted in MOE approved language centers.
- A letter 'V' indicates that the module is offered by external agencies or Institutes of Higher Learning, but is considered a school module.

### List of Subject Codes

<b>AR</b> Art	<b>CL</b> Chinese	<b>EL</b> English Language	<b>GM</b> German	<b>MA</b> Mathematics	<b>PE</b> Physical Education
<b>BG</b> Bengali	<b>CM</b> Chemistry	<b>EN</b> English Literature	<b>HD</b> Hindi	<b>MH</b> Higher Malay	<b>PJ</b> Punjabi
<b>BL</b> Biology	<b>CS</b> Computer Science	<b>FR</b> French	<b>HY</b> History	<b>ML</b> Malay	<b>TH</b> Higher Tamil
<b>CE</b> Character & Citizenship Education	<b>DV</b> Da Vinci	<b>GE</b> Geography	<b>HU</b> Humanities	<b>MU</b> Music	<b>TL</b> Tamil
<b>CH</b> Higher Chinese	<b>EC</b> Economics	<b>GJ</b> Gujarati	<b>JP</b> Japanese	<b>PC</b> Physics	<b>UD</b> Urdu

Examples:

- **EL2131** is an English module (EL) taught at academic level two (2). It is a core module (1).
- **CM1331** is a Chemistry module (CM) taught at academic level one (1). It is an enrichment module (3).
- **MA2232V** is a Mathematics module (MA) taught at academic level two (2). It is an elective module (2) that is conducted at an external agency (V).
- **CH3531** is a Higher Mother Tongue Language module (CH) taught at academic level three (3). It is a Mother Language Core module that follows the MOE Syllabus (5).

### **1.1.3 Pre-requisite(s)/Co-requisites/Preclusions**

<b>Pre-requisite(s)</b>	Modules which have to be satisfactorily completed in order to qualify to read the module that the student wants to register for. (Modules equivalent to the pre-requisites may also be accepted – please consult the relevant Department)
<b>Co-requisites</b>	Modules that are to be taken concurrently
<b>Preclusions</b>	Modules which have similar emphases and should not be taken together within a student's candidature

### **1.1.4 Modular Credits**

Under the modular system, workloads are expressed in terms of Modular Credits (MCs). A modular credit (MC) is a unit of the effort, stated in terms of time, expected of a typical student in managing his/her workload. The MC-value of a module is derived by dividing the estimated total number of workload hours per week for that module by the credit factor of 2. For example, a 4-MC semester-long module would require 8 hours of work a week, including lessons in class, laboratory sessions, assignments, and independent or group work in a semester. A 6-MC year-long (2 semesters) module would require 6 hours of academic work per week for an academic year.

## 1.2 Foundation Years

Students are to read all Core modules of the following academic subjects during their Foundation Years – English Language, Mother Tongue, Mathematics, Computer Science, Biology, Chemistry, Physics as well as Humanities, Art and Music. Please refer to the respective academic Departments for details. Students are also expected to read modules under the *Da Vinci* Programme. Please refer to the *Da Vinci* Programme for details.

### Compulsory Academic modules and Modular Credits in the Foundation Years

Year 1	Year 2	Year 3
English Language & EN 8	English Language 6	English Language 6
Mother Tongue <sup>1</sup> 6	Mother Tongue <sup>1</sup> 6	Mother Tongue <sup>1</sup> 8
Mathematics & CS 8	Mathematics 8	Mathematics 8
Biology 4	Biology 6	Biology 6
Chemistry 4	Chemistry 6	Chemistry 6
Physics 4	Physics 6	Physics 6
Art & Music 4	1 from AR, MU, GE, HY & EN 4	Continue choice in Yr 2 (1 from AR, MU, GE, HY & EN) 6
Integrated Humanities 4	Integrated Humanities 2	
<i>Da Vinci</i> 5	<i>Da Vinci</i> 5	<i>Da Vinci</i> 3
<b>Total<sup>2</sup> 42</b>	<b>Total<sup>2</sup> 44</b>	<b>Total<sup>2</sup> 46</b>

<sup>1</sup> It is compulsory for students to take up Mother Tongue Language modules, with the exception of students who have been exempted by the Ministry of Education. The figures shown assume students read Higher Mother Tongue modules. Students who read Mother Tongue module will have 6 MC in Year 3 instead of 8 MC.

<sup>2</sup> The total number of modular credits in the Academic Year of Studies excludes modules in the *Da Vinci* Programme as these modules do not have a Grade Point (refer to section 2.2 for details). *Da Vinci* Programme is reflected in this table to provide a complete representation of compulsory academic load.

### 1.3 Specialisation Years

Students are to complete the following during their Specialisation Years:

<b>English Language</b>	Students have to read all English Language Core modules from Years 4 - 6.
<b>Mother Tongue</b>	Students have to continue taking Mother Tongue modules, if they have not already fulfilled the requirements by Year 4. Please refer to the Mother Tongue Modules Offered, for details.
<b>Three Compulsory Major Subjects</b>	Students have to read <b>Mathematics</b> and <b>TWO Sciences</b> <sup>1</sup> as Major subjects. <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Science Subject 1</li> <li>• Science Subject 2</li> </ul>
<b>Advanced Research Project</b>	Students have to complete an Advanced Research Project (ARP) in any Mathematics, Science or Engineering domain. It is part of the <i>Da Vinci</i> Programme.
<b><u>Optional</u> Major Subject</b>	Students <b>may</b> read <b>ONE</b> of these subjects as the fourth Major, provided they have met the pre-requisite requirements of the selected subject. i.e. students are allowed to read a <b>maximum</b> of <b>FOUR</b> Major subjects, which can be from the following subjects: <ul style="list-style-type: none"> <li>• Science Subject 3<sup>1</sup></li> <li>• Art</li> <li>• Economics</li> <li>• English Literature</li> <li>• Geography</li> <li>• History</li> <li>• Music</li> </ul>
<b><u>Optional</u> Major with Honours</b>	Students <b>may</b> read any of the following subjects at Major with Honours level (refer to section 1.3.1), which is built on the Major curriculum. <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Biology</li> <li>• Chemistry</li> <li>• Physics</li> <li>• Computer Science</li> </ul>

<sup>1</sup> Science Subjects include Biology, Chemistry, Physics and Computer Science

## Compulsory Academic modules and Modular Credits in Specialisation Years

Year 4	Year 5	Year 6
English Language 6	English Language 6	English Language 6
Mother Tongue <sup>1</sup> 8		
Mathematics 10	Mathematics 10	Mathematics 10
Science subject 1 8	Science subject 1 8	Science subject 1 8
Science subject 2 8	Science subject 2 8	Science subject 2 8
		Humanities <sup>2</sup> 2
	<i>Da Vinci</i> 3	
<b>Total<sup>3</sup> 40</b>	<b>Total<sup>3</sup> 32</b>	<b>Total<sup>3</sup> 34</b>

<sup>1</sup> This assumes students read Higher Mother Tongue modules and clear the MOE MT requirement. If not, students will continue to read Mother Tongue module(s) in Year 5 or even Year 6.

<sup>2</sup> A Humanities Capstone module for students who do not have a Major in Humanities, Art or Music.

<sup>3</sup> Total number of modular credits in the Academic Year of Study excludes modules in *Da Vinci* Programme. *Da Vinci* Programme is reflected in this table so as to provide a complete representation of compulsory academic load.

### 1.3.1 Major with Honours

For Mathematics, Biology, Chemistry, Physics and Computer Science, the school offers specialization at Major and **Major with Honours** level. For Major with Honours, students will cover topics that are beyond the typical high school curriculum. Students who have maintained a consistently high achievement in the modules that they have read before the Specialisation Years may qualify, and be approved by the academic Departments, to read their choice(s) of Major subject(s) as Major(s) with Honours.

To complete a Major with Honours, an additional 2-MC Honours module must be read in every semester in Year 5 and 6 in addition to the Core modules read at the Major level.

## 2. Grading System

### 2.1 Assessment

Students are assessed through a combination of Continual Assessments (CA) and End-of-Semester Examinations. Continual Assessment can be based on quizzes, assignments, tests, practicals, projects, reports, presentations, etc. Students' academic progress will be noted by their subject teachers and mentors, who will be able to identify areas of difficulty and advise appropriate action.

## 2.2 Grade Point System

Academic performance for **CORE** and **ELECTIVE** modules is measured by Grade Points on a 5-point scale (including Mother Tongue Language modules):

Grade	A+	A	A-	B+	B	B-	C+	C	D+	D	F
Grade Point	5.0		4.5	4.0	3.5	3.0	2.5	2.0	1.5	1.0	0

A D grade and above are considered as passing grades.

Academic performance for **HONOURS**, **ENRICHMENT** and **DA VINCI** Programme modules is measured as shown in the following grade table.

Distinction	Merit	Pass	Unclassified
-------------	-------	------	--------------

No Grade Points are awarded for Honours modules, Enrichment modules and Da Vinci Programme modules. The performance of these types of modules is not used in the computation of CAP.

<b>Additional Indicators for Modules</b>	Exempted (EXE)	Students exempted from taking a Core module by the relevant academic Department will be awarded the Modular Credit(s), but will not receive a Grade Point. Refer to section 2.4.
	In Progress (IP)	For modules that extend more than one semester, the Grade Point will be given at the conclusion of the module. The status "IP" is assigned during the intervening semesters.
	Accelerated	Students completed a higher level module. Refer to section 2.5.
	Completed	Students completed the module.
	Repeated	Students repeated the module.
	Excluded	The module was excluded from Graduation CAP computation.

## 2.3 Cumulative Average Point (CAP)

Academic progress is tracked by the Cumulative Average Point (CAP), which is the weighted average grade point of all modules taken by a student. Therefore, a student's CAP is the sum of the module grade points multiplied by the number of MCs for the corresponding module, divided by the total number of MCs. This is represented as follows:

$$\text{CAP} = \frac{\text{sum (module grade point x MCs assigned to module)}}{\text{sum (MCs assigned to all modules used in calculating the numerator)}}$$

All CAP scores will be computed to 1 decimal place.

Modules with no grade point such as Honours, exempted and Enrichment modules do not contribute to CAP.

There are two different CAPs with different time frames and purposes – Promotion CAP and Graduation CAP.

Promotion CAP	Graduation CAP
<ul style="list-style-type: none"> <li>To determine promotion to next Academic Year of Study</li> </ul>	<ul style="list-style-type: none"> <li>To determine the Classification of Diploma (refer to section 3.3)</li> </ul>
<ul style="list-style-type: none"> <li>Year 1 to 5</li> </ul>	<ul style="list-style-type: none"> <li>Year 3 to 6</li> </ul>
<ul style="list-style-type: none"> <li>Shows the academic performance in the Academic Year of Study</li> </ul>	<ul style="list-style-type: none"> <li>Shows the academic performance of all the semesters from Year 3 Semester 1 up to the current semester</li> </ul>
<ul style="list-style-type: none"> <li>Grade points of ALL Core modules including Mother Tongue Language (MTL) Core modules and Elective modules read in the Academic Year are used for the computation of the Promotion CAP</li> </ul>	<ul style="list-style-type: none"> <li>The higher value of either computation               <ul style="list-style-type: none"> <li>Grade points of ALL Core modules and Elective<sup>1</sup> modules but excluding MTL Core modules</li> <li>Grade points of ALL Core modules and the MTL Core modules read in the final two years of academic studies to fulfill the MOE MTL requirement<sup>2</sup> as well as Elective<sup>1</sup> modules</li> </ul> </li> </ul>

<sup>1</sup> Electives are selected by the system, which will maximize the CAP for students. Exception is at Year 6 Semester 2, where students will select electives of their choice for inclusion into their Graduation CAP.

<sup>2</sup> For students taking Higher Mother Tongue Language, it will be modules in Year 3 and 4 (total 16 MCs). For students taking Mother Tongue Language, it will be modules in Year 4 and 5 (total 16 MCs).

### 2.3.1 Subject CAP

The Subject CAP is computed from grades of all Year 3-6 Core and selected Elective<sup>1</sup> modules in that subject. The elective modules that are included in these Subject CAPs are the same set that students have selected for inclusion into their Graduation CAP.

The following Subject CAPs will be displayed in the Academic Transcript:

Subject CAP	Additional Remarks
English Language	
Mother Tongue Language	The Mother Tongue Language (MTL) Subject CAP will include MTL Core modules read in the final two years of academic studies to fulfill the MOE MTL requirement as well as selected elective MTL modules.  Students who read MTL Syllabus B or are exempted from MTL by MOE will not have a MTL Subject CAP.
Mathematics	
Biology	
Chemistry	
Physics	
Humanities, Art and Music	For a student who does a 4 <sup>th</sup> Major in Art, Economics, English Literature, Geography, History or Music, the Humanities, Art and Music Subject CAP will include the area of Major in brackets. For example, a History Major student will have a Humanities, Art and Music (History) Subject CAP.
Computer Science	Only for students who read Computer Science at Major or Major with Honours level

### 2.4 Exemption from Modules

Teachers will recommend suitable students for diagnostic tests. Students can be granted exemption from reading a module if they fulfil the following conditions:

- Excellent performance in diagnostic tests and;
- Other Department requirements, subject to approval

Students fulfilling these conditions will be granted "EXE" status for that particular module and no grade point is awarded. Modular credits are fulfilled and will be reflected in the semester's progress report when the student is granted the module exemption. Modules that are exempted will not affect Promotion CAP, Graduation CAP or Subject CAP since it has no grade point. Interested students who wish to seek module exemption should approach the respective academic Departments for more information.

## **2.5 Acceleration of Modules**

A student can accelerate his/her studies by reading modules at an earlier semester(s) as compared to peers in the same academic level provided he/she meets the module's pre-requisite and gain approval from the Academic Department. For example, a Year 2 student may accelerate to read MA3131 in his/her Year 2 Semester 1 of study. The grade of the accelerated module MA3131 will be reflected in the Year 2 Semester 1 progress report and computed into the Promotion CAP just like all modules he/she read in that semester. However the grade of MA3131 will be computed into the Graduation CAP when he/she is in academic Year 3.

## **2.6 Failing and Repeating Modules**

Students who fail a **Core** module (F Grade) shall sit for a Viva. A student who passes the Viva will be given a D grade and the student will be deemed to have completed the core module. For CAP computation, the D grade will be used instead of the original F grade. A student who fails the Viva will have to repeat the module when it is offered again. Upon passing the repeated module, the student will be awarded a new grade.

Students who fail a module which is a pre-requisite to a higher level module would not be allowed to read the higher level module. However, a student may read both modules concurrently, on a case-by-case basis, subject to department and school approval - however, this is not applicable to students who do not meet minimum Promotion CAP of 2.5 to promote to the next academic Year of Study.

Students who fail an Honours module (Unclassified Grade), shall not be offered a Viva. The student is deemed to be unsuitable to handle the rigour of the Honours curriculum, and will no longer be allowed to continue with the Department's Honours programme.

## **2.7 Optional Examinations**

Years 5 and 6 students are encouraged to sit for the Advanced Placement (AP) Examinations, which are optional examinations offered by the United States College Board. AP results may enhance chances of gaining admission to overseas colleges/universities. For some universities, AP results are required for admission.

# **3. Promotion and Graduation**

## **3.1 CAP for Promotion**

A student must obtain a minimum Promotion CAP of 2.5 to promote to the next academic Year of Study. A student who is unable to meet the minimum Promotion CAP will repeat the Year of Study. This essentially means repeating all Core modules that a student has to read for that Year of Study.

## **3.2 Graduation Requirements**

For students to graduate with the NUS High School Diploma, they must fulfill ALL the following requirements:

- Obtain a minimum Graduation CAP of 2.5
- Pass all Year 3-6 Core modules for English Language

- Complete respective Mother Tongue Language modules, as required (refer to Mother Tongue Language Policy)
- Pass all Year 3 Core modules for Mathematics, Biology, Chemistry and Physics
- Pass all Year 4-6 Core modules for Mathematics Major, two Science Majors and 4<sup>th</sup> Major (if applicable)
- Pass respective Year 3 Core modules for Humanities, Art and Music, and Year 6 (for non-Humanities/Art/Music Majors), as required
- Pass Advanced Research Project

*Students must have completed at least **four** years of residency studies (including Years 4, 5 and 6) at NUS High School to graduate with the NUS High School Diploma.*

### **3.3 Classification of Diploma**

Students who graduate are awarded the NUS High School Diploma with High Distinction, Distinction, Merit or Pass, based on the Graduation CAP computed to the first decimal place.

<b>Class of Diploma</b>	Pass	Merit	Distinction	High Distinction
<b>Graduation CAP</b>	2.5 – 2.9	3.0 – 3.9	4.0 – 4.4	4.5 – 5.0

-----END -----

## **PROGRAMME OF STUDIES BY SUBJECT**

### **Mathematics and Statistics**

The mathematics curriculum at NUS High School is built upon important mathematical concepts such as number and algebra, geometry and measurement, function and graph, as well as probability and statistics.

Students will be able to apply these concepts in multiple ways using numbers, graphs, symbols, diagrams, and words. The learning process emphasises concept attainment through problem solving and reasoning, mathematical skills and tools, mathematical computation and modelling, and putting mathematics to work.

In the Foundation Years (Years 1 to 3), students are given a broad-based mathematical study of algebra, geometry, statistics and trigonometry. These topics serve as a foundation for many modules offered in the later years. Pre-calculus topics such as functions will also be taught. Students must be familiar with the properties of functions, the algebra of functions, the graphs of functions, the language of functions, and the values of trigonometric functions. Simple concepts of calculus are introduced too.

Students in the Specialization Years (Years 4 to 6) are required to read calculus at an extensive level that is comparable to calculus courses in colleges and universities. Vectors, numerical methods and mathematical proofs will also be touched upon. Students will also further their knowledge in pure mathematics and statistics. In addition, they have a range of electives to choose from to deepen their knowledge and widen their exposure.

The Department offers both Major in Mathematics and Major with Honours in Mathematics.

Mathematics Major is a compulsory subject major required for graduation with the NUS High School Diploma. To qualify for reading a Major with Honours in Mathematics, students have to achieve consistently excellent results in their Core modules.

Students are advised to follow the more appropriate choice on the basis of their academic performance. Students offering Major can opt to sit for the AP Calculus AB in their Year 5 whereas students offering Major with Honours can choose to sit for the AP Calculus BC in their Year 6. Students may also have the option of sitting for the AP Statistics in their Year 6. The respective AP examinations are optional.

The Department follows the general school policies on curriculum and assessment. For more details, please refer to the school curriculum framework.

The Department follows the general school policies on Exemption and Acceleration of Modules. Interested students shall approach the Head of Department for details on these matters.

Official (Open) / Non-Sensitive

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1	MA1131	Core	Foundations in Math IA	This module aims to develop some understanding of the essential concepts of mathematics. The basic operations of numbers, fundamental concepts of algebra and geometry will be discussed. Topics include whole numbers, factors and multiples, fractions and decimals, approximation and estimation. This module also covers concepts of algebraic expressions, equations and manipulation, standard form, rules of indices and graphs of linear equations.	3	None			3	
1	1	MA1231	Elective	Math Olympiad Training I	This module provides students with a taste of Olympiad-type mathematics. Students are expected to participate in the Singapore Mathematical Olympiad (Junior).	2	None			1.5	
1	2	MA1132	Core	Foundations in Math IB	This module aims to further develop an understanding of the essential concepts of foundational mathematics. Topics included are simultaneous linear equations, direct and inverse proportions, angle properties of triangles, quadrilaterals and polygons. This module also covers perimeter, area, volume and surface area of simple geometrical figures, symmetry, construction and loci. Coordinate geometry will be further developed as well. Students will also learn about various problem-solving heuristics and techniques.	3	MA1131			3	
1	2	MA1232	Elective	Math Olympiad Training II	This module targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Junior).	2	MA1231, Department Approval		MA1232V	1.5	
1	2	MA1232V	Elective	Math Olympiad Training II	This module targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Junior). The course is taught by an external trainer.	2	MA1231, Department Approval			1.5	
1	1 or 2	MA1331	Enrichment	Fun with Fractals	This enrichment module explores the topic of fractals through a series of hands-on activities and experimentation. Students are expected to work in groups to produce a product demonstrating fractal properties by the end of the module.	2	None			1.5	
2	1	MA2131	Core	Foundations in Math IIA	This module builds upon the previous foundation. Topics covered include quadratic functions and inequalities, graphs of simple polynomials, congruency and similarity. Circle geometry, basic set language and notation will also be introduced. Topics like simple trigonometrical ratios, bearings and 3-dimensional problems are covered too.	4	MA1132			4	
2	1	MA2231	Elective	Math Olympiad Training III	This module builds upon the previous Junior Olympiad training. It targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Senior).	2	MA1232, Department Approval		MA2231V	1.5	
2	1	MA2231V	Elective	Math Olympiad Training III	This module builds upon the previous Junior Olympiad training. It targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Senior). The course is taught by an external trainer.	2	MA1232V, Department Approval			1.5	
2	2	MA2132	Core	Foundations in Math IIB	This module covers the essential concepts of basic data analysis, permutations and combinations, probability and surds. Circle geometry is further developed. Students will also learn about matrices and 2D vectors.	4	MA2131			4	

2	2	MA2232	Elective	Math Olympiad Training IV	This module targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Senior).	2	MA2231, Department Approval		MA2232V	1.5	
2	2	MA2232V	Elective	Math Olympiad Training IV	This module targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Senior). The course is taught by an external trainer.	2	MA2231V, Department Approval			1.5	
3	1	MA3131	Core	Foundations in Math IIIA	This is an important pre-calculus course that is a prerequisite for many advanced modules. It aims to model and solve problems involving quadratic equations using algebraic approach. Other solutions of equations will also be discussed through the use of remainder and factor theorem and partial fractions. Students will also solve inequalities involving absolute-valued functions. Exponential, logarithmic and trigonometric functions will also be explored in further details.	4	MA2132			4	
3	1	MA3231	Elective	Math Olympiad Training V	This module builds upon the previous Senior Olympiad training.	2	MA2232, Department Approval		MA3231V	1.5	
3	1	MA3231V	Elective	Math Olympiad Training V	This module builds upon the previous Senior Olympiad training. The course is taught by an external trainer.	2	MA2232V, Department Approval			1.5	
3	1	MA3331	Enrichment	Foundation Mathematics (Bridging Module)	This bridging module is compulsory for second intake students. It covers concepts like rules of indices, surds, set theory and geometric properties of circle. Students will perform simple operations with indices and surds, including rationalizing the denominator. The Cartesian coordinates system will be used to analyze geometrical situations and solve related problems. Basic counting techniques, probability and data analysis are taught too.	3	None			1.5	Bridging module (For new Yr 3 intake only)
3	2	MA3132	Core	Foundations in Math IIIB	Students will be familiarized with the properties of functions, the algebra of functions and the graphs of functions. These functions include inverse functions, absolute value functions and piecewise functions. Students will be taught graphs of various functions and the solving of inequalities involving rational functions. Further trigonometrical identities and calculus are introduced, as well as Binomial Theorem.	4	MA3131			4	
4	1	MA4131	Core (Major)	Advanced Math IA	This module covers topics such as number sequences, summation of series, arithmetic and geometric series. Students will learn to extend the vector approach to 3D. There will also be discussion on the complex numbers system, where numbers can be expressed in Cartesian or polar forms. Students will learn to represent complex numbers in the Argand diagram. Further work will also be done on calculus and various methods of proofs.	5	MA3132			5	
4	1	MA4231V	Elective	Math Olympiad Training VI	This module targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Senior and Open).	2	MA3231V, Department Approval			1.5	
4	2	MA4132	Core (Major)	Advanced Math IB	Transformation of graphs and vectors in 3D are introduced in this module. The method of difference and proof by mathematical induction will also be taught. Further topics in calculus that will be covered include analysis of graphs, Maclaurin series (including	5	MA4131			5	

					binomial), integration techniques and applications of integrals to find area and volume.						
5	1	MA5131	Core (Major)	Advanced Calculus	This demanding and rigorous course introduces calculus typically covered in a university course. Continuity and differentiability of functions are introduced. Topics include fundamental theorem of calculus, Intermediate Value Theorem, Mean Value Theorem, limits of functions, asymptotic and unbounded behavior. First and second order differential equations and their applications to real-life problems will also be taught.	5	MA4132			5	
5	1	MA5231V	Elective	Math Olympiad Training VII	This module targets high ability students who are keen to prepare themselves rigorously for the Singapore Mathematical Olympiad (Open).	2	MA4231V, Department Approval			1.5	
5	1	MA5232	Elective	Modern Geometric Topology	In the beginning of 20th century, mathematicians noticed that topological idea is essential to understand continuity, differentiation and integration of functions. Euclidean spaces such as the real line, the plane and the 3-dimensional space can be generalized to manifolds. Though manifolds of dimension less than 3 is well-known, we still do not see enough for three dimensional manifolds. To study these manifolds, we can use differentiation, combinatorics and topology. In particular, geometric topology including knot theory gives a good road to explore low dimensional manifolds. In this module, students will study knots and related topics such as braids and polynomials.	2	MA4132 or MA5109			1.5	
5	1	MA5431+	Honours	Linear Algebra	This Honours module introduces students to the operations on matrices and its applications to solving system of linear equations. Topics on vector spaces, linear transformations, rank and nullity, eigenvalues and eigenvectors will also be explored.	2	MA4132			2	+ Students majoring with Honours in Mathematics must complete at least 8 MCs of the Honours Modules.
5	2	MA5132	Core (Major)	Statistics	This module is a comprehensive study of various probability distributions and statistical concepts. Topics include Binomial Distribution, Poisson Distribution, Normal Distribution, Sampling Distribution, t-distribution, test of significance, correlation and linear regression. Exploring random phenomena using probability and simulation will also be discussed.	5	MA2132			5	
5	2	MA5431V	Honours	Linear Algebra	This is an NUS Module in-lieu of NUSHS Linear Algebra Module. This module is a first course in linear algebra. Fundamental concepts of linear algebra will be introduced and investigated in the context of the Euclidean spaces $R^n$ . Proofs of results will be presented in the concrete setting. Students are expected to acquire computational facilities and geometric intuition with regard to vectors and matrices. Some applications will be presented. Major topics: Systems of linear equations, matrices, determinants, Euclidean spaces, linear combinations and linear span, subspaces, linear independence, bases and dimension, rank of a matrix, inner products, eigenvalues and eigenvectors, diagonalization, linear transformations between Euclidean spaces, applications.	4	MA5131, Department Approval	Student can only take MA5431 or MA5431V to fulfil math honours program.		4	In order to fulfil Math Honours, a student must take: 1. MA5431V (4MC) and MA6431V (4MC), OR 2. MA5431 (2MC) and MA6431V (4MC) and MA6432/MA6433 (2MC), OR 3. MA5431 (2MC), MA5432 (2MC) and MA6431V (MC)

											A total of 8 MC.
5	2	MA5432+	Honours	Polar Coordinates, Parametric Equations and Vector Functions	In this module, students will explore the polar coordinate system. Parametric equations are introduced. Derivatives and integrals of polar, parametric and vector functions will also be taught.	2	MA5131			2	+ Students majoring with Honours in Mathematics must complete at least 8 MCs of the Honours Modules.
6	1	MA6131	Core (Major)	Advanced Statistics	This demanding and rigorous course is a continuation of the previous statistics course. Topics include t-distribution and chi-square distribution. Estimation, test of significance, correlation and linear regression will be revisited at a deeper level. Design of experiments and survey methodology will also be covered.	5	MA5132			5	
6	1	MA6431+	Honours	Honours Calculus	This demanding and rigorous Honours course exposes students to advanced applications of calculus involving parametric, polar and vector functions as well as polynomial approximations and convergence of series. Formal definitions of continuity and differentiability are also introduced. This module is more than sufficiently prepared to take the AP Calculus BC examination. Those who are keen may also try for the NUS Advanced Placement Credit Exam in Calculus.	2	MA5432			2	+ Students majoring with Honours in Mathematics must complete at least 8 MCs of the Honours Modules.
6	1	MA6431V	Honours	Honours Calculus	This is an NUS Module in-lieu of NUSHS Honours Calculus Module. This is a course in single-variable calculus which will introduce precise definitions of limit, continuity, the derivative and the Riemann integral. Students will be exposed to computational techniques and applications of differentiation and integration. This course concludes with an introduction to first order differential equations.	4	MA5131, Department Approval	Student can only take MA6431V or MA6431V to fulfil math honours program.		4	In order to fulfil Math Honours, a student must take: 1.MA5431V (4MC) and MA6431V (4MC), OR 2.MA5431 (2MC) and MA6431V (4MC) and MA6432/MA6433 (2MC), OR 3.MA5431 (2MC), MA5432 (2MC) and MA6431V (MC)  A total of 8 MC.
6	2	MA6132	Core (Major)	Advanced Math II	This module revisits concepts covered in earlier Advanced Mathematics modules and extends it further. Students will learn to solve 3D vectors problem involving lines and planes. The use of De Moivre's theorem to find the nth roots of a complex number and to prove mathematical results will also be covered. Theory of equations (up to degree 4) and recurrence relations will be taught too.	5	MA4132, MA5131			5	
6	2	MA6432^	Honours	Numerical Analysis	This module covers a variety of numerical approaches to find approximate solutions to problems that are not open to the analytical approach. Concepts covered include numerical solutions to linear equations, numerical estimation of definite integrals and solving differential equations numerically.	2	MA6431/MA6431V			2	+ Students majoring with Honours in Mathematics must complete at least 8 MCs of the Honours Modules. ^Students

											either take MA6432 or MA6433.
6	2	MA6433^	Honours	Graph Theory	Graph Theory is a branch of discrete mathematics which deals with discrete objects and quantities and has wide applications, particularly in computer science and engineering. In this module, students will learn the nature and properties of simple graphs, and different types of graphs such as connected graphs, regular graphs, complete graphs, bipartite graphs and trees. They will also learn the application of graph theory including tournament, matching, and scheduling problems.	2	MA6431/MA6431V			2	+ Students majoring with Honours in Mathematics must complete at least 8 MCs of the Honours Modules. ^Students either take MA6432 or MA6433.

## **Computer Science**

Infocomm Technology is becoming an integral part of our life in the new global economy. Computing education at NUS High aims to equip students the ability to use computational thinking and creativity to understand and change the world. Computing has deep links with mathematics, science and design and technology, and provides insights into both natural and artificial systems. Computing also ensures that students become digitally literate (i.e. be able to use, express themselves and develop their ideas through information and communication technology, at a level suitable for the future workplace and as active participants in a digital world).

The Computer Science curriculum in NUS High School is divided into two key stages – Foundation and Specialisation Years.

In the Foundation Years (Year 1 to 3), students are exposed to a breadth of topics in Computing so that they can appreciate what the study of Computer Science is about. In particular, all students will be required to read CS1131 Computational Thinking in Year 1 Semester 2. Computational thinking is taking an approach to solving problems, designing systems and understanding human behaviour that draws on fundamental concepts in computer science. Via this module, students will be exposure to three key areas in Computer Science: 1) Problem Solving, 2) Programming Principles & Concepts and 3) Data Skills. The modules in the Foundation Years aim to ignite students' interest and passion in Computer Science, and also serve as a foundation for many modules offered in the later years.

In the Specialization Years (Year 4 to 6), students will be exposed to more advanced Computer Science concepts, and relate these ideas to the diverse computing systems and applications in real life.

The Department offers both Major in Computer Science and Major with Honours in Computer Science. To qualify for reading a Major with Honours in Computer Science, students have to achieve consistently excellent results in their Core modules.

The Department follows the general school policies on curriculum and assessment. For more details, please refer to the school curriculum framework.

Official (Open) / Non-Sensitive

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/ wk	Remarks
1	2	CS1131	Core	Computational Thinking	Computational thinking is taking an approach to solving problems, designing systems and understanding human behaviour that draws on fundamental concepts in computer science. This module consists of three main units: 1) Problem Solving, 2) Programming Principles & Concepts and 3) Data Skills. Students will be able to 1) Learn and apply a variety of problem-solving techniques to discover a solution to problems that are situated in a variety of contexts. 2) Understand basic programming principles and concepts such as iterations, conditionals and variables using turtle graphics. 3) Perform simple data cleaning, analysis and visualization using various functions in Excel and learn about the importance of data security.	2	None			2	
2	1	CS2231	Elective	Introduction to Programming	This elective will introduce to students basic programming principles and concepts. Students will learn about important programming concepts such as variables, data types, assignment statements and expressions, conditional statements, loops and list. Students who have completed the module would be able to write useful programs to solve problems.	2	CS1131			1.5	
2	2	CS2232	Elective	Computer Fundamentals	Computer Fundamentals aim to introduce and examine the core components of computer systems. This elective covers a foundational understanding of computer hardware, operating systems, software, peripherals and basic programming. Students will be using the Raspberry Pi for the module to explore the computer system.	2	CS2231			1.5	
2	2	CS2233	Elective	Problem Solving in Computing	The aim of this module is to introduce students to the discipline of computing and to the problem solving process. Students will apply the programming concepts learnt to solve various problems.	2	CS2231			1.5	
3	1	CS3231#	Elective	Object Oriented Programming I	This module introduces the concepts of Object Oriented Programming (OOP) using Java. Topics include: Introduction to Java and OOP concepts, control flow, use of Java API, the use and design of classes and objects, use of Arrays & ArrayList, simple File IO & Exception handling, and creating Java GUI applications.	3	CS2231			3	# Students majoring in Computer Science (CS) in the Specialisation Years will have CS3231 and CS3233 reflected as CS3131 and CS3132 respectively as these electives will be converted to core modules for the CS Major and will be included in their CS Subject CAP.
3	1	CS3232	Elective	Informatics Olympiad Training I	The Informatics Olympiad emphasizes creativity in problem solving on one hand, and programming skill and expertise on the other. This module targets high ability computing students who are keen to prepare themselves rigorously for various Informatics Olympiad competitions and at the same time hope to create more awareness among computing students on the finer points of programming, which is not merely writing a piece of code, but involves useful algorithmic techniques and problem-solving skills.	2	CS2233		CS3231	1.5	
3	2	CS3233#	Elective	Object Oriented Programming II	This module is the second part of a two-part series on introductory programming from an object-oriented perspective. It continues the	3	CS3231			3	# Students majoring in Computer Science (CS) in

					introduction to object-oriented programming begun in CS3204, with an emphasis on more advanced concepts in OOP (e.g. inheritance, abstraction, polymorphism). Students will also learn how to create a Graphical User Interface in Java (JavaFX, Graphics, Animation etc).						the Specialisation Years will have CS3231 and CS3233 reflected as CS3131 and CS3132 respectively as these electives will be converted to core modules for the CS Major and will be included in their CS Subject CAP.
3	2	CS3234	Elective	Informatics Olympiad Training II	This module targets high ability computing students who are keen to prepare themselves rigorously for the National Informatics Olympiad competition. Advanced algorithmic topics such as dynamic programming, graph algorithms, greedy algorithms, trees etc are covered in this module.	2	CS3232		CS3233	1.5	
4	1	CS4131	Core (Major)	Mobile Application Development	This course introduces students to the design and implementation of Android applications for mobile devices. Students will develop an App from scratch, assuming a good knowledge of Java, and learn how to set up Android Studio, work with various Android building blocks (Activities, Services, Broadcast, etc) to create simple user interfaces to make Apps run smoothly. At the end of the course, students will learn skills for creating and deploying Android applications.	4	CS3233			3	
4	1	CS4231	Elective	Informatics Olympiad Training III	This module targets high ability computing students who are keen to prepare themselves rigorously for the National Olympiad in Informatics. Advanced data structures such as fenwick tree, segment tree and advanced algorithms such as dynamic programming will be discussed in the module.	2	CS3234			1.5	
4	2	CS4132	Core (Major)	Data Analytics	This module aims to allow students to understand the foundational skills in data analytics, including preparing and working with data; abstracting and modeling an analytic question; and using tools from statistics, learning and mining to address these questions. Students will study techniques for how to go from raw data to a deeper understanding of the patterns and structures within the data, to support making predictions and decision making.	4	CS4131			3	
4	2	CS4133V*	Core (Major)	Programming Methodology	This module is offered by NUS School of Computing as CS1010S. This module introduces the fundamental concepts of problem solving by computing and programming using an imperative programming language. It is the first and foremost introductory course to computing. Topics covered include problem solving by computing, writing pseudo-codes, basic problem formulation and problem solving, program development, coding, testing and debugging, fundamental programming constructs (variables, types, expressions, assignments, functions, control structures, etc.), fundamental data structures: arrays, strings and structures, simple file processing, and basic recursion.	4	CS4131			4	* Students majoring with Honours in Computer Science and chosen to read Honours Track from NUS School of Computing (SoC) must read this module.
4	2	CS4134V~	Core (Major)	High-level Programming II: The C++ Programming Language	This course introduces the C++ language with particular emphasis on its object-oriented features. Topics include stylistic and usage differences between C and C++, namespaces, function and operator overloading, classes, inheritance, templates, and fundamental STL components.	4	CS4131			4	~ Students majoring with Honours in Computer Science and chosen to read Honours Track from DigiPen Institute of Technology Singapore must read this module.

5	1	CS5131	Core (Major)	Introduction to Artificial Intelligence	This course aims to introduce techniques to build computers that are capable of exhibiting intelligent behavior. It will cover a wide range of modern Artificial Intelligence topics including search, logic, knowledge representation etc. The module will provide students with an overview of the applications of Artificial Intelligence.	4	CS4132 or CS4133V or CS4134V			3	
5	2	CS5132	Core (Major)	Data Structures and Algorithms	This module aims to introduce students to advanced data structures and algorithms in programming. Topics covered include: uses and implementations of abstraction and encapsulation through classic data structures (lists, stacks, queues, trees), basic algorithmic analysis, graph representation and various graph-search algorithms.	4	CS5131			3	
5	1 or 2	CS5431V#	Honours Track 1 (SoC)	Discrete Structures	This module is offered by NUS School of Computing as CS1231. This module introduces mathematical tools required in the study of computer science. Topics include: (1) Logic and proof techniques: propositions, conditionals, quantifications. (2) Relations and Functions: Equivalence relations and partitions. Partially ordered sets. Well-Ordering Principle. Function equality. Boolean/identity/inverse functions. Bijection. (3) Mathematical formulation of data models (linear model, trees, graphs). (4) Counting and Combinatoric: Pigeonhole Principle. Inclusion-Exclusion Principle. Number of relations on a set, number of injections from one finite set to another, Diagonalisation proof: An infinite countable set has an uncountable power set; Algorithmic proof: An infinite set has a countably infinite subset. Subsets of countable sets are countable.	4	CS4133V			4	# Students majoring with Honours in Computer Science and chosen to read Honours Track from NUS School of Computing (SoC) must read at least 2 options.
5	1 or 2	CS5432V^	Honours Track 2 (DigiPen)	Computer Environment	This module is offered by DigiPen Institute of Technology Singapore as CS100. This course provides students with a detailed examination of the fundamental elements on which computers are based. Topics covered include number systems, representation of numbers in computation, basic electricity, electric circuits, digital systems, logic circuits, data representations, digital memory, computer architecture, and operating systems. Operational code and assembly languages are discussed, examined, and used in either a microprocessor or microcontroller environment, such as a personal computer or an autonomous car.	4	CS4134V			4	^ Students majoring with Honours in Computer Science and chosen to read Honours Track from DigiPen Institute of Technology Singapore must read at least 2 options.
6	1	CS6131	Core (Major)	Database Design	This module aims to equip students with the fundamental concepts of database design. The module covers data definition and modeling, database access and command languages, and design and implementation in the context of the relational database model.	4	CS5132			3	
6	2	CS6132	Core (Major)	Computer Networking & Security	This module aims to equip students with the fundamental concepts of computer networking. Students will acquire the basic knowledge of data transmission, TCP/IP protocol architecture, local area network technologies, wireless network and concept of network routing and forwarding. It also teaches the basic concepts and principles of information security, and the fundamental approaches to secure computers and networks.	4	CS6131			3	
6	1 or 2	CS6431V#	Honours Track 1 (SoC)	Computer Organization	This module is offered by NUS School of Computing as CS2100. The objective of this module is to familiarise students with the fundamentals of computing devices. Through this module students will understand the basics of data representation, and how the various parts of a computer work, separately and with each other. This allows students to understand the issues in computing devices, and how these issues affect the implementation of solutions. Topics covered include data representation systems, combinational and sequential circuit design techniques, assembly	4	CS4133V			4	# Students majoring with Honours in Computer Science and chosen to read Honours Track from NUS School of Computing (SoC) must read at least 2 options.

					language, processor execution cycles, pipelining, memory hierarchy and input/output systems.						
6	1 or 2	CS6432V#	Honours Track 1 (SoC)	Introduction to Operating Systems	This module is offered by NUS School of Computing as CS2106. This module introduces the basic concepts in operating systems and links it with contemporary operating systems (eg. Unix/Linux and Windows). It focuses on OS structuring and architecture, processes, memory management, concurrency and file systems. Topics include kernel architecture, system calls, interrupts, models of processes, process abstraction and services, scheduling, review of physical memory and memory management hardware, kernel memory management, virtual memory and paging, caches, working set, deadlock, mutual exclusion, synchronization mechanisms, data and metadata in file systems, directories and structure, file system abstraction and operations. Examples will be discussed from contemporary operating systems such as Unix/Linux and/or Windows.	4	CS6431V			4	# Students majoring with Honours in Computer Science and chosen to read Honours Track from NUS School of Computing (SoC) must read at least 2 options.
6	1 or 2	CS6433V^	Honours Track 2 (DigiPen)	Operating Systems I: Man-Machine Interface	This module is offered by DigiPen Institute of Technology Singapore as CS180. This course presents an overview of modern operating systems as implemented on personal computers. It presents an overview of what an operating system is and does, with emphasis on the following topics: organization and design, process management, threading, interprocess communication, process synchronization, and memory management.	4	CS5432V			4	^ Students majoring with Honours in Computer Science and chosen to read Honours Track from DigiPen Institute of Technology Singapore must read at least 2 options.
6	1 or 2	CS6434V^	Honours Track 2 (DigiPen)	Game Implementation Techniques	This module is offered by DigiPen Institute of Technology Singapore as CS230. This presents game implementation techniques and engine architecture. Students investigate foundational concepts of game architecture, such as game-system component separation and game flow, while learning about essential elements such as the game state manager, input/output handler, and frame rate controller. CS 230 introduces Windows programming, state machines, and collision detection algorithms, which students will integrate into their own remakes of classic games. As part of their implementation, students create and expand their own collision, vector, and matrix libraries, enabling them to incorporate basic physics engines. Students survey concepts in space partitioning, particle systems, map editors, and other elements as a bridge to more advanced concepts in implementation techniques and engine architecture.	4	CS4134V			4	^ Students majoring with Honours in Computer Science and chosen to read Honours Track from DigiPen Institute of Technology Singapore must read at least 2 options.

## **Biology**

The Biology Curriculum is uniquely designed to cover both breadth and depth of the subject. Modules adopt a spiral and thematic approach that aims to enable students to build a solid foundation in biology and prepare them for advanced studies of biology and biology related disciplines. In chronological sequence of learning, these modules are Foundations in Biology I, Foundations in Biology II, Foundations in Biology III, Advanced Biology I, Advanced Biology II and Applied Biology.

The first three years are Foundation Years which will introduce students to the basic concepts of the various fields of biology, while allowing them to develop observation and inquiry skills. Besides equipping them with a good foundation, the experiential and hands-on learning will also provide an opportunity for them to pick up good habits of the mind and effective scientific skills. The topics covered include cell biology, human biology, botany, animal physiology, genetics and molecular biology.

The next three years are Specialization Years whereby students who are interested in pursuing biology related disciplines in universities will continue their learning in biology beyond the basics. The topics covered include evolutionary biology, ecology, biodiversity, molecular genetics and biochemistry. Students will explore biological phenomena, learn more extensively via outdoor field trips and engage in more in-depth investigations. There is more exposure to critical thinking and analytical skills in the more demanding modules, as well as an emphasis towards more knowledge application in broader and concept-orientated perspectives. Students will also become more independent in their learning approaches.

The Department offers both Major in Biology and Major with Honours in Biology. To qualify for reading a Major with Honours in Biology, students have to achieve consistently good results in Core Modules.

Students will have the option of sitting for the AP Biology examination in Year 6.

The Department follows the general school policies on curriculum and assessment. For more details, please refer to the school curriculum framework.

The Department does not practice exemption and acceleration of modules. Students who may have advanced knowledge in certain topics in biology will still be expected to go through the modules to attain hands-on experience in the laboratory and in the field, which unlike theoretical knowledge, cannot be acquired from textbooks.

Official (Open) / Non-Sensitive

Level	Sem	Module Code	Module Type	Module Title	Description	Module Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1 and 2	BL1131	Core	Foundations in Biology I	This is a year-long module that aims to develop students' theoretical and practical competencies in biology, so that they will build a strong foundation, encompassing both breadth and depth, on which to further their studies in biology through the course of the NUS High curriculum. The module begins with a macro perspective of life by getting students to explore how biotic and abiotic factors may influence the diversity and distribution of organisms, and discuss ethical issues related to the environment. Next, students will zoom into the study of the building blocks of life – cells. In order to support life, movement of biological molecules into and out of cells must occur – therefore mechanisms through which this can be facilitated are also subsequently studied. The biological molecules that move in and out of cells are also studied in detail; and students will also carry out investigations regarding how these substances can be identified. Lastly, students will explore the fate of biological molecules in both animal and plant systems with regards to nutrition. Three biological themes are addressed at various points during the module: the correlation between structure and function, the relation between a system and its parts, as well as the flow of energy through biological units. The discussion of bioethical issues is also infused at appropriate points. At the end of the module, it is hoped that students will be inspired to develop a passion for biology through acquiring a deep understanding of the concepts taught and awareness of their applications to daily life, through frequent hands-on activities designed to develop practical skills in a scaffolded manner, as well as through excursions and discussions.	4	None			4	Year long module
2	1	BL2231	Elective	Biology Olympiad Training I	This module is designed for Year 2 students who are selected due to their excellent performance in biology modules. These students will explore some challenging concepts not taught in the core modules. Students can expect rigorous training in a wide range of biology topics as well as answering techniques. Students will be encouraged to take part in various biology competitions where appropriate. This module is by invitation only.	2	Department Approval			1.5	
2	2	BL2232	Elective	Biology Olympiad Training II	This module is for students who have done well for BL2231. It is also open to Year 2 students whose Semester 1 performance in BL2131 is consistently excellent. These students will continue to explore some challenging concepts not taught in the core modules. Students can expect rigorous training in a wide range of biology topics as well as answering techniques. Students will be encouraged to take part in various biology competitions when appropriate. This module is by invitation only.	2	Department Approval			1.5	
2	1 and 2	BL2131	Core	Foundations in Biology II	This year-long module will continue to equip students with the basic foundational knowledge required to learn biology at a more advanced level subsequently. The main topics that are covered in this module include transport and reproduction in flowering plants and humans, as well as respiration, excretion and homeostasis in humans. Where appropriate, various bioethical issues and laboratory experimentation will be covered at suitable junctures throughout the module. Laboratory practical sessions will serve to enhance students' learning and understanding.	6	BL1131			3	Year long module
3	1	BL3231	Elective	Biology Olympiad Training III	This module is designed for students who like to challenge themselves with the difficult concepts in biology. They will learn additional topics and explore the concepts beyond what they have covered in their Year 3 core biology modules in greater depth. It also prepares them for the UK Biology Challenge that is opened to all students who are 13 to 15 years old, as well as the Singapore Junior Biology Olympiad (SJBO) that is opened to Year 2 to 4 students. This module is by invitation only.	2	Department Approval			1.5	

3	1	BL3331	Enrichment	Foundations In General Biology	This is a bridging module offered to the yearly intake of new Year 3 students. Students will be equipped with foundational knowledge from core content such as ecology, basic cell biology, and basic physiology through mass lectures. In addition, a key emphasis in the second half of the module will be the development and familiarization of hands-on biological skills that will equip students in studying biology in their senior high years. Laboratory skills involving microscopy, microbiology and physiology techniques will be taught.	2	None			1.5	Bridging module (For new Yr 3 intake only)
3	2	BL3232	Elective	Biology Olympiad Training IV	This module is for students who have done well in BL3231. It is also open to Year 3 students whose Semester 1 performance in BL3131 is consistently excellent. These students will explore some challenging concepts not taught in the core modules. Students can expect rigorous training in biology topics that will prepare them for the following year's biology competitions. This module is by invitation only.	2	Department Approval			1.5	
3	1 and 2	BL3131	Core	Foundations in Biology III	After acquiring the basic foundational knowledge in biology in Year 1 and 2, students will move on to learn about the human nervous, endocrine and excretory systems,. In addition, how cell divides by mitosis and meiosis will also be covered before students learn about the concepts of inheritance and genetic variation. For the section on molecular genetics, the structure of DNA and its role in protein synthesis, genes, genetic engineering and medical biotechnology will be covered. The last part of the module focuses on in-depth study of the cell and molecules of life. It includes the cell theory, the functions of membrane systems and organelles in cells, the structure of a typical bacterial cell, the structures of biomolecules and their functions, the structural components of viruses, as well as the fluid mosaic model of membrane structure. Where appropriate, various bioethical issues and laboratory experimentation will be covered at suitable junctures throughout the module.	6	BL2131			3	Year long module
4	1	BL4231	Elective	Biology Olympiad Training V	This module is designed for Year 4 students who are selected due to their consistently excellent performance in their previous years' biology modules. They will be trained for the Singapore Junior Biology Olympiad (SJBO) in this module. Students can expect rigorous training in topics that are not taught in the core modules. This module is by invitation only.	2	Department Approval			1.5	
4	2	BL4232	Elective	Biology Olympiad Training VI	This module is for students who have done well for BL4232 or those whose Semester 1 performance in BL4131 is consistently excellent. Students will be rigorously trained in topics of biology that are not covered in the core modules. The training is an important preparation for the Singapore Biology Olympiad (SBO) in the following year. This module is by invitation only.	2	Department Approval			1.5	
4	1 and 2	BL4131	Core (Major)	Advanced Biology I	Based on the foundation that students have built in the lower years, this module will explore various biological topics in greater depth. The topics covered include mode of action of enzymes, stem cells, eukaryotic chromatin, genetics of viruses and bacteria, genome organization, control of gene expression, mutations, cancer biology, energy and equilibrium, as well as biological evolution. Where appropriate, various bioethical issues and laboratory experimentation will be covered at suitable junctures throughout the module.	8	BL3131			4	Year long module
5	1	BL5231	Elective	Biology Olympiad Training VII	This module is designed for students who are selected due to their consistently excellent performance in their previous years' biology modules. They will be trained for the Singapore Biology Olympiad (SBO) in this module. Students can expect rigorous training in a wide range of biology topics as well as answering techniques. This module is by invitation only.	2	Department Approval			1.5	
5	1	BL5431	Honours	Advanced Biology III	This module provides an exciting platform for the study of animal diversity. The module provides a brief introduction to the science behind classification by learning about taxonomy and phylogeny. Students will learn about the different invertebrate and vertebrate taxa, with an emphasis on diagnostic characteristics, evolutionary	2	BL4131			2	

					relationships, functional adaptations and environmental interactions. The interdisciplinary nature of this module aims to develop in students a deeper understanding and appreciation of the evolutionary innovations in the animal kingdom. Laboratory practicals will allow students to examine specimens in details. Field trips will also be organised for students to learn about taxonomical work and the natural heritage of Singapore.						
5	2	BL5232	Elective	Biology Olympiad Training VIII	This module is for students who have done well for BL5231 or those who are invited to read it due to their consistently excellent performance in their Year 5 biology modules. They will go through rigorous preparation for the Singapore Biology Olympiad (SBO), which will be held at the end of the module in November and December. A final selection of students will be made in the course of this module and they will get to represent the school in the SBO.	2	Department Approval			1.5	
5	2	BL5432	Honours	Advanced Biology IV	Students' basic knowledge about biochemistry will be reinforced and enhanced. Various metabolic and biochemical pathways will be covered extensively. Metabolic pathways include those covering carbohydrates, lipids and proteins. Research writing proposals will also contribute to the authentic learning of students.	2	BL4131			2	
5	2	BL5433 V	Honours in lieu	NUS/LSM110 5 Evolutionary Biology	Evolutionary biology covers the history of life on our planet and the processes that produced the multiple life forms of Earth. Topics include: the origins of life, the eukaryotic cell, and multicellularity; the generation of genetic variation and the sorting of that variation through random processes and through natural and sexual selection; the origin of new traits, new life histories, and new species; the origins of sex, sociality, and altruism; the evolution of humans; and applications of evolutionary biology to solving modern-day problems.	4	BL3131 and BL4131			4	LSM1105 can only be read in Year 5 Sem 2; quota of only 5 students per semester
5	1 and 2	BL5131	Core (Major)	Advanced Biology II	This module builds on what students have learnt from BL4131, Advanced Biology I. Students will deepen their understanding of various advanced level biological topics which they will be exploring in a rigorous manner. The module deepens students' understanding of the following fields: ecology, physiology, genetics, and cytology. Students' knowledge of biochemistry, evolution and biodiversity is also strengthened and broadened through the infusion of concepts and ideas from these fields throughout the module. Focus is deliberately placed on the applications of concepts learnt within the module to issues encountered in daily life or at the national and global level, which involves the consideration of other disciplines. Besides cross-disciplinary links, the module also focuses on drawing links between the different fields of biology. The module begins by introducing students to the ecology curriculum unique to NUS High School. It also covers immunology and infectious diseases, DNA technology, neuronal signalling, and ethology and its applications. Through the module, the big idea of evolutionary pressures and the trade-offs between different evolutionary strategies, across the different topics, is emphasised. Where appropriate, various bioethical issues will also be explored. Besides field work, students will also be given the opportunity to experience the following in a hands-on manner: running statistical simulations and analyses using ICT tools, simulating intra-specific and inter-specific competition, carrying out gene cloning, using ELISA to diagnose HIV, and measuring the effect of neuromodulators on action potentials generated in the nervous system of a cricket.	8	BL4131			4	Year long module
6	1	BL6431	Honours	Advanced Molecular Genetics I	Students' basic knowledge about molecular genetics will be reinforced and enhanced. This module introduces students to an in-depth understanding of forward and reverse genetics, as well as their importance to study the possible functions of the genes. Through lectures and practical sessions, various molecular techniques used to determine the gene functions will be covered in details, such as random mutagenesis, gene knock-out in mice and reverse transcription polymerase chain reaction. Techniques (such as yeast two-hybrid and phage display) to decipher gene-to-gene interactions will also be	2	BL4131, BL5131			2	

					discussed. Importantly, the purpose of studying gene interaction as a means to determine a particular gene function shall be highlighted. Through the various practical sessions, students will acquire molecular skills to extract RNA for studying gene expression in Salmon fish, as well as performing TA cloning and blue-white selection to screen for recombinant bacteria. The knowledge of molecular techniques will be reinforced through these hands-on practical lessons. Finally, students will also be introduced to the usage of different bioinformatics tools for studying gene sequences and functions.						
6	1	BL6433 V	Honours in lieu	NUS/LSM1106 Molecular Cell Biology	The objective is to provide the student with a firm and rigorous foundation in current concepts of the structure and functions of biomolecules in molecular cellular biology. These fundamental concepts form the basis of almost all recent advances in biological and the biomedical sciences. The lectures will introduce various cellular organelles as models to gain insights into how structures and functions of classes of biomolecules participating in important cellular processes.	4	BL3131 and BL4131			4	LSM1106 can only be read in Year 6 Sem 1; quota of only 5 students per semester
6	1	BL6434 V	Honours in lieu	NUS/LSM1102 Molecular Genetics	This module covers topics on (i) the patterns of inheritance, (ii) the molecular properties of genes and chromosomes, (iii) transcription and translation, (iv) genetic methods and technology, and (v) genetic analysis of individuals and populations. This will include an in-depth understanding of mendelian patterns of inheritance and variations that could occur due to multiple alleles, lethal genes, chromosomal variations, linkage, gene interaction and other genetic phenomena. Emphasis is placed on the understanding of the underlying molecular and biochemical basis of inheritance. Quantitative and population genetics will also be discussed with the emphasis of understanding the processes and forces in nature that promote genetic changes.	4	BL4131 and BL5131			4	LSM1102 can only be read in Year 6 Sem 1; no quota for LSM1102
6	2	BL6432	Honours	Advanced Molecular Genetics II	This module will be built on the knowledge acquired in Advanced Molecular Genetics I. The module will highlight the function of proteins in relation to their structures and how knowledge of chemical properties of proteins is required in the selection of appropriate and effective laboratory methods and techniques used during protein extraction, detection, purification and quantification. Students will learn the principles of these laboratory techniques and appreciate their applications in the study of proteins. Research article critique will also contribute to the authentic learning of students in analyzing experimental data critically.	2	BL4131, BL5131			2	
6	1 and 2	BL6131	Core (Major)	Applied Biology	After acquiring advanced-level knowledge in biology, this module enables students to appreciate the application aspects of biology. Part of the focus in Semester 1 will be on the consolidation of key concepts through the years. This will be useful for students who would like to take the relevant external examinations. In the second half of the module, current trends in biology and other relevant contemporary topics will be introduced and emphasized. The issues in these areas can be explored via field trip, industrial visit and other relevant learning journeys, peer-teaching presentations, journal research, research writing and invited guest lecturers who are experts in these fields.	8	BL4131 and BL5131			4	Year long module

## **Chemistry**

The Chemistry curriculum in NUS High School of Mathematics and Science is a 6-year course which aims to deliver a meaningful learning experience for every student, and seeks to nurture the student as an inquirer. It is designed to ultimately instil depth in the understanding of fundamentals, and high competency in solving chemical problems. Our exciting curriculum takes on a spiral approach and is divided into two key stages – Foundation and Specialisation.

The objectives of the Foundation Years (Years 1, 2 and 3) are to build a strong understanding in basic and essential concepts in Chemistry and to develop a sense of appreciation for the subject and how closely it relates to our surroundings. The topics introduced will cover a wide breadth, using a conceptual approach, with an emphasis on understanding the behaviour of our physical world from the perspective of atoms and molecules. In addition, students will be frequently engaged in laboratory activities and during the course of which, learn the process of scientific investigations and basic laboratory skills.

In the Specialisation Years (Years 4, 5 and 6), students will be introduced to more advanced concepts. Many of these concepts build on what the students already understand from the Foundation Years and the topics are treated in a more in-depth manner. Modules also incorporate higher order questions to stimulate the analytical minds of the students. At the same time, laboratory work is more intensive as students are now more ready to take on independent research to complement the theory covered in class.

Students will have the option of sitting for the AP Chemistry examination in Year 6.

The Department offers Chemistry Major with Honours for students who have an aptitude and interest in this subject. To qualify, students have to achieve consistently excellent results in the Core modules.

The Department follows the general school policies on curriculum and assessment. For more details, please refer to the school curriculum framework.

Official (Open) / Non-Sensitive

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1 and 2	CM1131	Core	Foundations in Chemistry I	This is a year-long module that is designed to introduce students to basic ideas and principles in Chemistry and places emphasis on understanding and application of scientific concepts. Topics covered include experimental chemistry, kinetic theory of matter, acid-base reactions, as well as chemical bonding, formulae and equations. As Chemistry is an experimental science, students will have numerous opportunities to handle basic laboratory apparatus during the practical sessions. The knowledge and skills introduced in this module are essential to the understanding of Chemistry in the more advanced modules.	4	None			2	Year long module
1	1 and 2	CM1331	Enrichment	Chemical Potpourri I	This lab-based module covers a series of chemical investigations ranging over several areas of Chemistry. Students can look forward to activities which complement the formal study of Chemistry in the classroom and provide opportunities for developing analytical skills in dealing with chemical problems.	2	None			2	
2	2	CM2231	Elective	Chemistry Olympiad Training I	This introductory module serves to engage talented students with a more in-depth study of the concepts learnt in Year 1 and 2 core modules, with the incorporation of some new concepts. It also serves to train the students' problem-solving ability and nurture their scientific common sense.	2	Department Approval			1.5	
2	1 and 2	CM2131	Core	Foundations in Chemistry II	This year-long module is a continuation from Foundations in Chemistry I, and aims to strengthen the fundamental chemistry concepts required for chemistry students to appreciate and master the chemistry modules taught at higher levels. The emphasis in this module is to enable students to apply their foundational knowledge of the various aspects of chemistry in understanding chemical reactions including precipitation, acid-base and redox reactions. Emphasis will also be given to practical skills required for the volumetric and qualitative analysis of chemicals.	6	CM1131			3	Year long module
2	1 or 2	CM2331	Enrichment	Chemical Potpourri II	Chemistry plays an integral role in the daily running of our lives. This module aims to continue to give students insight and appreciation of the chemistry that affects our daily activities through chemical investigations that range over several areas of Chemistry, such as the food we eat and the soaps we use.	2	CM1131			1.5	
3	1	CM3231	Elective	Chemistry Olympiad Training II	This module serves to engage talented students in chemistry with a more in-depth study of topics learnt in Years 1-3 core modules. New concepts will be included and many are built on the key understanding of the concepts acquired previously. This module also aims to train the students' problem solving ability and nurture their scientific skills to get them better prepared for the Olympiad competitions.	2	Department Approval			1.5	
3	1	CM3332	Enrichment	Foundations in Chemistry (Bridging)	This is a bridging module for new students joining our school at Year 3. It aims to allow students to master fundamental chemistry knowledge which will be required for the understanding of higher chemistry modules. There will also be hands-on experience in volumetric analysis and basic chemical analysis.	2	Department Approval			1.5	Bridging module (For new Yr 3 intake only)
3	2	CM3232	Elective	Chemistry Olympiad Training III	This module serves to engage talented students in chemistry with a more in-depth study of topics learnt in Years 1-3 core modules. New concepts will be included and many are built on the key understanding of the concepts acquired previously. This module also aims to train the students' problem	2	Department Approval			1.5	

					solving ability and nurture their scientific skills to get them better prepared for the Olympiad competitions.						
3	1 and 2	CM3131	Core	Foundations in Chemistry III	This module extends the concepts covered in the first two foundation modules. It will introduce students to the fascinating world of Organic Chemistry and also delve a little deeper into Chemical Bonding. Other topics covered include Energy Changes and Redox Reactions. Concluding this module, students will consolidate what they have learnt in the foundation years.	6	CM2131			3	Year long module
4	1	CM4131	Core (Major)	Chemical Bonding and States of Matter	The basic ideas of quantum theory are introduced, as these are essential in describing the modern view of atomic structure. This module continues with the Valence Bond Theory and the concept of hybridisation will be discussed to explain for the formation of covalent bonds. The properties of gases, liquids and solutions will also be examined in greater detail. To facilitate the understanding of concepts, physical experiments related to these topics will be carried out by the students.	4	CM3131			4	
4	1	CM4231	Elective	Chemistry Olympiad Training IV	These are chemistry elective modules specially designed for Year 4 students who have done very well in chemistry and show potential in handling more challenging content and tackling harder physical chemistry problems.	2	Department Approval			1.5	
4	2	CM4132	Core (Major)	Chemical Kinetics and Equilibria	Chemical Kinetics is the study of rates of chemical reactions. The module introduces the Collision theory to explain how various factors affect rates of reactions. It also covers in depth the quantitative description of reaction kinetics, followed by proposing reaction mechanisms that are consistent with experimental rate laws. The concept of Equilibrium is fundamental in almost all chemical reactions, as well as many physical processes. This module explores the idea of reversible reactions, dynamic equilibrium in a closed chemical system, and how various factors can influence an equilibrium system. With this understanding, we will be able to describe chemical equilibrium quantitatively using equilibrium constants. The module also deals with various homogeneous and heterogeneous equilibria in depth, ranging from gaseous equilibria to aqueous equilibria of weak acids and bases, buffer solutions and sparingly soluble salts.	4	CM4131			4	
4	2	CM4232	Elective	Chemistry Olympiad Training V	These are chemistry elective modules specially designed for Year 4 students who have done very well in chemistry and show potential in handling more challenging content and tackling harder physical chemistry problems.	2	Department Approval			1.5	
5	1	CM5131	Core (Major)	Organic and Inorganic Chemistry	Organic chemistry has been the frontier of chemical research. It surrounds us in every part of our life and its knowledge transcends all disciplines of science. The vast majority of chemical compounds known to man are organic; that is, they are compounds built on a carbon framework. Organic compounds vary greatly in size and complexity, from the simplest hydrocarbon, methane, to macromolecules, made up of thousands of atoms. The inorganic chemistry component covers the main group elements in the s and p blocks and the transition elements in the d block. This module aims to provide a unifying approach to the general physical and chemical characteristics of these elements and their compounds. In addition, students will also explore a class of compounds known as coordination compounds, which exhibit interesting structures, bonding, and colours.	4	CM4131 and CM4132			4	
5	1	CM5231	Elective	Chemistry Olympiad Training VI	These are chemistry elective modules specially designed for Year 5 students who have done very well in chemistry and display a strong passion for the subject. During the course, students must show potential in handling more challenging content and tackling higher order chemistry problems. Students	2	Department Approval			1.5	

					who exhibit high level of understanding and competence may eventually be shortlisted for the Singapore Chemistry Olympiad (SChO).						
5	1	CM5431	Honours	Separation Science	This module covers the various aspects of separation techniques used in modern day chemistry. Students will gain an understanding of distillation, extraction, and various chromatographic methods, including Thin Layer Chromatography (TLC), gas chromatography (GC), ion-exchange chromatography and high performance liquid chromatography (HPLC). Students will also gain practical experience into these topics.	2	CM4131 and CM4132			2	
5	2	CM5132	Core (Major)	Thermodynamics and Electrochemistry	Chemical Thermodynamics is the study of the interrelation of heat and work with chemical reactions. The module makes use of the First Law of Thermodynamics to establish an understanding of enthalpy change of reaction and focuses on the measurements of enthalpy changes by calorimetry, and the calculations of enthalpy changes by the Hess' Law. The module further makes use of the Second Law of Thermodynamics, focusing on the use of Gibbs free energy change, to predict and explain the spontaneity of a reaction under a specific set of conditions. The Third Law of Thermodynamics is also discussed in order to have a complete understanding of entropy changes of reactions. Building upon the redox as well as reactivity concepts covered in the foundation years, this module will delve deeper into electrochemistry, covering the principles underlying the function of galvanic cells and the selective discharge of ions in electrolytic cells.	4	CM4131 and CM4132			4	
5	2	CM5232	Elective	Chemistry Olympiad Training VII	These are chemistry elective modules specially designed for Year 5 students who have done very well in chemistry and display a strong passion for the subject. During the course, students must show potential in handling more challenging content and tackling higher order chemistry problems. Students who exhibit high level of understanding and competence may eventually be shortlisted for the Singapore Chemistry Olympiad (SChO).	2	Department Approval			1.5	
5	2	CM5432	Honours Option	Structural Elucidation	This module covers the different approaches and methods that are employed by scientists in modern day chemistry to deduce the structural features of unknown compounds. Some of the characterization techniques covered will include nuclear magnetic resonance (NMR) spectroscopy, mass spectrometry (MS), and infrared (IR) spectroscopy. These analytical skills will aid them greatly in their pursuit, particularly in Science and Engineering.	2	CM5131			2	
5	2	CM5433	Honours Option	Principles of Chemical Engineering	This module provides students with a basic concept of chemical engineering processes and related problem-solving methods. It provides an introduction to the principles of chemical engineering process analysis. The module discusses details of steady state material and energy balances, including recycles, bypass, purge, phase change and chemical reactions. Other topics include simultaneous mass and energy balances. Students taking this module must have a strong foundation in mathematics.	2	CM5131 and CM5132			2	
5	2	CM5434 V	Honours in lieu	NUS/CM1111 Inorganic Chemistry 1	Basic concepts of acids and bases, and periodicity and chemistry of most main group elements are covered in this module. Topics include Bronsted and Lewis acids and bases, hard and soft acid- base concept, and group trends and general properties of metals and non-metals.	4	CM5131 and Department Approval			4	NUS CM1111 can only be read in Year 5 Sem 2
6	1	CM6131	Core (Major)	Chemistry in Context	This module aims to allow students to explore various commonly encountered contexts where chemistry is applied in areas of industry, research, pharmaceuticals, forensics as examples. Over the course of the module, key cornerstone chemical concepts – the big ideas, the enduring	4	CM5131 and CM5132			4	

					understanding and essential knowledge in chemistry will be revisited and consolidated.						
6	1	CM6434 V	Honours in lieu	NUS/CM1121 Organic Chemistry 1	This module covers the characteristic properties, methods of preparation, and reactions of alkanes/cycloalkanes, alkenes, alkynes, benzene and other aromatic compounds, alkyl halides; alcohols; ethers; epoxides, phenols, aldehydes and ketones; carboxylic acids and their derivatives; amines.	4	CM5131 and Department Approval			4	NUS CM1121 can only be read in Year 6 Sem 1
6	2	CM6132	Core (Major)	Experiments in Synthetic Chemistry	This module provides an introductory experience in laboratory synthesis and analytical techniques. Chemical synthesis is one of the most valuable skills to learn in a chemistry laboratory and these practical sessions are designed to provide a thorough training in elementary techniques commonly employed in synthetic chemistry. Analytical techniques such as chromatography will also be featured in this highly intensive laboratory module.	4	CM5131 and CM5132			4	
6	2	CM6431	Honours	Emerging Trends in Chemistry	This module aims to equip students with an understanding of the current and emerging issues that affect us and how chemistry is linked to these issues. These include organocatalysis, graphene chemistry, organic chemistry, environmental chemistry, nanochemistry, medicinal chemistry and inorganic chemistry. Guest speakers will be invited to discuss their current research, and the latest technology and developments in Chemistry.	2	CM5131 and CM5132			2	
6	1 or 2	CM6231	Elective	Medicinal Chemistry	As the pharmaceutical industry develops and grows here in Singapore, it is important to be attuned to the role that chemistry plays in concert with other science disciplines in the process of drug discovery. This theory-intensive module will give a taste of the realm of medicinal chemistry, from discovery to synthesis and development to biological activity. Students will require an interest in organic chemistry, biochemistry and biomolecular sciences.	2	CM5131 and CM5132			1.5	
6	1 or 2	CM6232	Elective	Forensic Science	Forensic science is the application of science in the resolution of legal disputes. Science is valuable in this context because of its potential in providing reliable, pertinent and often definitive information about a given case. In this module, students will learn about the basic principles behind forensic science, such as recording and preservation of crime scenes, analysis of trace and contact evidence, examination of body fluids and forensic pathology. The role of forensic science in influencing detective fiction and vice versa will also be covered. Students will also study how detective fiction has evolved in its narrative nature from works by authors such as Edgar Allan Poe, Sir Arthur Conan Doyle and Agatha Christie to film directors such as Alfred Hitchcock, as well as famous TV series, such as CSI. In addition to fiction, students will also briefly study how forensic science has influenced board games, as well as the authenticity of the forensic science used in these board games.	2	CM5131 and CM5132			1.5	
6	2	CM6432	Honours Option	Advanced Organic Chemistry	Organic chemistry surrounds us in every part of our life and its knowledge transcends all disciplines of science. The vast majority of chemical compounds known to man are organic; that is, they are compounds built on a carbon framework. Organic compounds vary greatly in size and complexity, from the simplest hydrocarbon, methane, to macromolecules, made up of thousands of atoms. In this advanced module, students will go more in depth and scope of the types of reactions they have learnt in the previous organic chemistry module.	2	CM5131			2	
6	2	CM6433	Honours Option	Quantum Chemistry and its Applications	This module aims to provide students with the understanding of the physical and mathematical aspects of quantum chemistry and molecular electronic structure. Areas to be covered include history and development, basic	2	CM5131 and CM5132			2	

					principles and Schrodinger equation, common approximations and molecular geometry predictions. A strong foundation in mathematics is important for this course.

## **Physics**

The Physics & Engineering curriculum in NUS High School spans 6 years and is divided into two key stages – Foundation and Specialisation Years.

Foundation modules (Year 1, 2 & 3) are designed to ensure that students receive a strong grounding in fundamental physics concepts such as motion, conservation of energy and electricity. There is a greater emphasis on hands-on activities to enable students to develop a conceptual understanding of these concepts.

The Specialisation modules (Year 4, 5 & 6) build on what has been introduced in the earlier years, covering a wide range of topics from Rotational Mechanics to Practical Circuitry and Modern Physics. Honours students will extend their study in mechanics and electromagnetism through the use of calculus as well as offer a module on Special Relativity. The emphasis is on deepening students' understanding and extending their learning through a higher level of analytical and mathematical sophistication. These modules provide the necessary foundation for students to take university modules in physics and engineering.

Besides the core modules, the department offers an excellent variety of elective & enrichment modules, which are intended to cater to students' varied interests and passions in physics. Examples of these areas include robotics and astronomy.

The Department offers both major in physics and major with honours in physics. A summary of the required modules is given in the table below. All students are strongly encouraged to keep physics as a major regardless of their field of specialisation in university. All physics students will have the option of sitting for the AP Physics 1 examination in Year 5. Students offering major in physics will have the option of sitting for the AP Physics 2 examination in Year 6, while students offering major with honours in physics will have the option of sitting for the AP Physics C examinations in Year 6.

The Department follows the general school policies on curriculum and assessment. For more details, please refer to the school curriculum framework.

Official (Open) / Non-Sensitive

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1 and 2	PC1131	Core	Foundations in Physics I	This module provides an introduction to some foundational topics in physics. These include Physical Quantities, Units & Measurement, Mass, Weight & Density, General Wave Properties, Sound, Light and the Electromagnetic Spectrum.	4	None			2	Year long module
1	1	PC1331	Enrichment	Robotics I	This module is an introduction to the building and programming of robots using the LEGO Mindstorms EV3 Robotics Kit. Students will learn the principles of mechanical design, construction, programming and teamwork. In small teams, using LEGO blocks, motors and sensors, students will explore various mechanical components such as gears, levers and pulleys to build and control robots. The course will be structured as a series of missions that the students will be required to complete.	2	None			1.5	This module is offered subject to teaching manpower availability
1	2	PC1332	Enrichment	Robotics II	This module will focus on the Lego Mindstorms EV3 platform. Students will use the EV3 sets to design, build and programme robots. Students will get to explore the various sensors that are available in the EV3 Kit and relate to real-life examples of how these sensors are applied. It is preferable but not necessary that students have had some basic hands-on experience with the NXT/ EV3 platform.	2	None			1.5	This module is offered subject to teaching manpower availability
1	2	PC1333	Enrichment	Introductory Astronomy	This module provides an introduction to some introductory topics in astronomy. These include the structure of the universe, models of the solar system, the celestial sphere and tools of astronomy, including telescopes & charge-coupled devices.	2	None			1.5	This module is offered subject to teaching manpower availability
2	1 and 2	PC2131	Core	Foundations in Physics II	This module provides an introduction to some foundational topics in physics. These include Scalars & Vectors, Motion along a Straight Line, Newton's Laws of Motion, Energy, Work & Power, the Kinetic Model of Matter, Transfer of Thermal Energy, Temperature and Thermal Properties of Matter.	6	PC1131			3	Year long module
2	1	PC2331	Enrichment	Robotics III	In this module, students will code in VB.NET and will learn, amongst other things, about structured programming, VS object-oriented programming, loops, arrays and conditional statements through the introduction of microcontrollers and electronics. They will work with various types of sensors, learn to programme them to obtain data, and use the data to control servo motors, lights, sound and a rich touchscreen display screen.	2	None			1.5	This module is offered subject to teaching manpower availability
2	2	PC2332	Enrichment	Robotics IV	This module will see students learning more advanced applications. Robotic platforms, Game Programming, and Vision Systems may be introduced at this stage, using the same programming language and microcontroller platform. This module is a follow up to PC2302. However students who have not attended PC2302 will still be able to take this module.	2	None			1.5	This module is offered subject to teaching manpower availability
2	1	PC2333	Enrichment	Astronomy I	This module provides an introduction to further topics in astronomy. These include stars (including Herzsprung-Russell diagrams), the evolution of stars, galaxies and cosmology.	2	None			1.5	This module is offered subject to teaching manpower availability
3	1 and 2	PC3131	Core	Foundations in Physics III	This module provides an introduction to some foundational topics in physics. These include Projectile Motion, Turning Effect of Forces, Equilibrium, Pressure, Static Electricity, Current & Electricity, Direct Current Circuits, Practical Electricity, Magnetism, Electromagnetism, Principles of Electromagnetic Induction and a qualitative discussion of Nuclear Physics.	6	PC2131			3	Year long module

3	1	PC3231	Elective	Physics Olympiad Training II	This module covers challenging problems in physics and can be taken as preparation for the Singapore Junior Physics Olympiad (SJPO).	2	None			1.5	
3	2	PC3232	Elective	Physics Olympiad Training III	This module covers challenging problems in physics and can be taken as preparation for the Singapore Junior Physics Olympiad (SJPO).	2	PC3231			1.5	
3	2	PC3331	Enrichment	Astronomy II	This module provides an introduction to further topics in astronomy These include the sun, the solar system and other planetary systems.	2	None			1.5	This module is offered subject to teaching manpower availability
3	1	PC3333	Enrichment	Bridging Module	This module revisits the topics taught in Year 1 and Year 2 and is targeted at students who join the school in Year 3.	2	None			1.5	Bridging module (For new Yr 3 intake only)
4	1	PC4131	Core (Major)	Advanced Physics I	This module provides an introduction to some advanced topics in physics. These include Circular Motion, Momentum, Impulse & Collisions, Oscillations and Gravitation	4	PC3131			4	
4	2	PC4132	Core (Major)	Advanced Physics II	This module provides an introduction to some advanced topics in E&M Physics. These include Electrostatics, Electric Fields & Interactions, Capacitance & Dielectrics, Direct Current Circuits, Electromagnetism, Electromagnetic Induction, and Alternating Currents.	4	PC3131			4	
4	1	PC4231	Elective	Physics Olympiad Training IV	This module covers challenging problems in physics and can be taken as preparation for the Singapore Junior Physics Olympiad (SJPO).	2	PC3232			1.5	
4	2	PC4232	Elective	Physics Olympiad Training V	This module covers challenging problems in physics and can be taken as preparation for the Singapore Physics Olympiad (SPhO).	2	PC4231			1.5	
4	1	PC4331	Enrichment	Astronomy III	This module covers challenging topics in Astronomy and can be taken as a preparation for Singapore Astronomy Olympiad	2	None			1.5	This module is offered subject to teaching manpower availability
5	1	PC5131	Core (Major)	Advanced Physics III	This module provides an introduction to some advanced topics in physics. These include Rotational Motion, Mechanical Waves, the Doppler Effect, Superposition & Standing Waves, Beats, Interference, Single Slit Diffraction, Multiple Slit Diffraction and Ray Optics.	4	PC4131 and PC4132			4	
5	2	PC5132	Core (Major)	Advanced Physics IV	This module provides an introduction to some advanced topics in physics. These include Nuclear Physics, Black body radiation, the Photoelectric Effect, the Compton Effect, Wave-Particle Duality, Line Spectra, Quantum Tunnelling.	4	PC4131 and PC4132			4	
5	1	PC5231	Elective	Physics Olympiad Training VI	This module covers challenging problems in physics and can be taken as preparation for the Singapore Physics Olympiad (SPhO).	2	PC4232			1.5	
5	2	PC5232	Elective	Physics Olympiad Training VII	This module covers challenging problems in physics and can be taken as preparation for the Singapore Physics Olympiad (SPhO).	2	PC5231			1.5	
5	1	PC5233	Elective	Physics in Review I	This is a consolidation module for students who wish to revise the previous topics taught from Year 1 to 5.	2	None			1.5	
5	1	PC5431	Honours	Calculus-based Physics I	This module provides an introduction to the use of advanced mathematical techniques such as differentiation and integration to analyse and solve physics problems. Some topics on Mechanics and Electricity & Magnetism will be revisited with the application of calculus in problem-solving, where appropriate.	2	PC4131 and PC4132			2	
5	2	PC5432	Honours	Calculus-based Physics II	This module builds on PC5431 and exposes students to the use of advanced mathematical techniques such as solving ordinary differential equations to analyse and solve physics problems in Mechanics	2	PC5431			2	

5	2	PC5432V	Honours in lieu	NUS/PC1141: Introduction to Classical Mechanics	This module presents the fundamental principles of classical mechanics. It covers such topics as kinematics, Galilean transformation, Newton's laws of motion, dynamics of a particle with generalization to many particle systems, conservation laws, collisions, angular momentum and torque, motion of a rigid body, gravitation and planetary motion, static equilibrium, oscillatory motion and vibrational modes, waves, Doppler's effect and fluid mechanics. The module also has a practical component consisting of five experiments designed to enhance students' understanding of some of the concepts discussed in lectures. This module is targeted at science students who wish to acquire a working knowledge of mechanics, and is an essential for physics majors.	4	PC5431			4	3 NUS modules can be read in lieu to fulfil NUSHS Physics Honours requirement: 1) NUS/PC1141: Introduction to Classical Mechanics in Y5Sem2 2) NUS/PC1143: Introduction to Electricity & Magnetism in Y6Sem1 3) NUS/PC1144: Introduction to Modern Physics in Y6Sem1
6	1	PC6131	Core (Major)	Advanced Physics V	This module provides an introduction to some advanced topics in physics. These include Temperature & the Kinetic Theory of Gases, the First Law of Thermodynamics, Heat Engines, Entropy and the Second Law of Thermodynamics, as well as an introduction to semi-conductor Physics and Special Relativity	4	PC5131 and PC5132			4	
6	2	PC6132	Core (Major)	Practical Circuitry & Introductory Electronics	This module equips students with the necessary knowledge and skills for circuit analysis. Students are introduced to basic components such as resistors, capacitors and inductors and concepts such as Kirchhoff's Voltage Law and Kirchhoff's Current Law. Emphasis is placed on the development of practical skills where students spend time in the laboratory setting up and analysing circuits using equipment such as digital multimeters and oscilloscopes. This module also introduces students to the basics of electronics with a focus on diodes and progresses to the design of rectifiers and finally to a simple DC power supply. Students will also be introduced to the workings of a bipolar junction transistor.	4	PC5131 and PC5132			4	
6	1	PC6431	Honours	Calculus-based Physics III	This module builds on PC5431 and exposes students to the use of advanced mathematical techniques such as solving ordinary differential equations to analyse and solve physics problems in Electricity & Magnetism.	2	PC5431			2	
6	1	PC6431V	Honours in lieu	NUS/PC1143: Introduction to Electricity & Magnetism	This module covers the fundamentals of electricity and magnetism: electric fields, electric flux and Gauss's law, electric potential; capacitance, dielectrics, current and resistance; DC circuits; magnetic fields, magnetic effect of currents, Ampere's law, electromagnetic induction; AC circuits; magnetism in matter; electromagnetic waves. The module also has a practical component consisting of five experiments designed to enhance students' understanding of some of the concepts discussed in lectures. This module is targeted at science students who wish to acquire a working knowledge in electricity and magnetism, and is an essential for physics majors.	4	PC5431			4	3 NUS modules can be read in lieu to fulfil NUSHS Physics Honours requirement: 1) NUS/PC1141: Introduction to Classical Mechanics in Y5Sem2 2) NUS/PC1143: Introduction to Electricity & Magnetism in Y6Sem1 3) NUS/PC1144: Introduction to Modern Physics in Y6Sem1
6	2	PC6432	Honours	Numerical Modelling of Physical Systems	This module provides an introduction on the application of numerical methods and computational modelling to Physics problems. Through these, students pick up valuable computational modelling skills to analyze physical systems and gain greater physical insights into the phenomena or systems under study.	2	PC5431			2	

6	1	PC6433V	Honours in lieu	NUS/PC1144: Introduction to Modern Physics	This module introduces the ideas of modern physics to students, with an emphasis on conceptual understanding. Topics covered are a) Einstein's theory of special relativity, including time dilation, length contraction, and his famous equation $E=mc^2$ , b) Quantum physics, where the observed phenomena of black body radiation, the photoelectric effect and Compton scattering, leading to the quantization of angular momentum and energy, atomic transitions and atomic spectra, c) Introduction to quantum mechanics, introducing the Heisenberg uncertainty principle, wave-mechanics and wave particle duality, and the use of wavefunctions in predicting the behaviour of particles trapped in potential wells, d) Nuclear physics, introducing radioactivity and decay processes, nuclear interaction and binding energy, fission and fusion, and e) Sub-atomic elementary particles and their classification. The module is targeted at science students who are interested in learning about the more recent developments in physics, and is an essential for physics majors.	4	PC5431			4	3 NUS modules can be read in lieu to fulfil NUSHS Physics Honours requirement: 1) NUS/PC1141: Introduction to Classical Mechanics in Y5Sem2 2) NUS/PC1143: Introduction to Electricity & Magnetism in Y6Sem1 3) NUS/PC1144: Introduction to Modern Physics in Y6Sem1

## **English Language and Literature**

### **1 Introduction**

The English Language curriculum is a six-year programme with nine core modules that students will undergo and must pass to fulfil the requirements for graduation with the NUS High School Diploma.

Foundational Literature is incorporated into the Year 1 and 2's English Language module, EL1131 and EL2131. Students can opt for Literature as their choice of humanities in Year 2 and 3, and their 4<sup>th</sup> major in Year 4, 5 and 6.

In addition, English Language and linguistics elective modules are offered to further develop the talent and passion of selected students.

### **2 Overview of the modules**

#### **English Language**

The English Language and Literature Curriculum aims to nurture students who are world-ready thinkers and communicators. Students will communicate effectively in varied contexts as a result of their development in listening, reading, speaking and writing. More importantly, it seeks to develop in students a broad and mature understanding of a range of subject matter pertaining to the local and world affairs as well as the ability to analyse and evaluate them critically and creatively. In addition, the programme hopes to cultivate students' literary consciousness, lifelong interest in the language, love for and appreciation of texts of varied genres, which will enable their journey in self-directed learning.

The curriculum adopts a constructivism approach, which engages the learner in making meaning from authentic texts and using language in real-world contexts. For every module, an integrated and holistic strategy is used, to ensure acquisition of key language skills in listening, reading, speaking and writing. Class time will be devoted to critical and creative thinking, decision-making, learning-focused interaction and problem-solving in authentic contexts.

The curriculum in Years 1 and 2 focuses on the appreciation and creation of literary works and functional texts. Through text types such as personal recounts, narratives, descriptive works, poetry, and plays, the modules aim to develop students' language and literary skills. The study of Literature and skills of literary analysis will be incorporated in the English Language modules. In addition, students will be introduced to a wide range of functional texts like factual recounts and information reports. They will apply knowledge of textual and linguistic features to communicate effectively for real world purposes.

In Year 3, 4 and 5, students will be introduced to expository and argumentative texts. Through exposure to a broad range of expositions and other text types covering various social issues and concepts, students will learn to understand, appreciate and analyse arguments and persuasive elements in these texts. They will acquire techniques in responding to arguments and writing expository essays.

In Year 3 and 4, students will apply these skills to complete authentic tasks such as the creation of advertisements and collaterals; writing and presenting advocacy speeches,

campaigns, reports and proposals. Themes related to society such as family, education, youth, the aged, media, the arts and culture, crime, science and technology, and prejudice and discrimination will be studied.

In Year 5, students acquire knowledge and understanding of diverse topic areas through extensive reading, group discussions and independent research. These topic areas include the study of globalisation; nation and policies; politics; science and ethics as well as local and global forces/events shaping the world. They will develop skills in analysing and evaluating varied world issues across disciplines, and understand their significance and implications for the individual, nation and the global community. They will continue to hone their skills in critical reading and formulating cogent arguments.

In Year 6 Semester 1, students will be introduced to academic writing and reading skills to prepare them for the university, and to expand their potential as thinkers, writers and communicators. In Year 6 semester 2, students will opt for one reading/writing or linguistic module based on their interest and ability.

Students must pass all English Language core modules in Year 3 to 6 to fulfil the requirements for graduation with the NUS High School Diploma. As English Language is a process skills subject where class attendance and participation are imperative for skills development, the department does not allow for exemption or acceleration of modules.

Official (Open) / Non-Sensitive

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1 and 2	EL1131	Core	Language and Literary Studies I	This year-long module aims to deepen students' understanding of Self & Identity through four distinct thematic units: Friendship, Family, Choices and Belonging. Through these thematic units, students will acquire the skills to write various text types/genres spanning from prose, poetry and play. Students will also explore and engage with a litany of multi-modular texts including the module's main novel A Wrinkle in Time, as well as short stories, plays poems and movies. Students will also develop their reading comprehension skills as well as poetry analyses. Students will also learn how to construct structured responses in the form of P-E-E to express their appreciation of writer's style, characterisation and setting in short prose excerpts. Additionally, students will also develop their oratorical skills through exploring collaborative discussions, oral presentations and Readers' Theatre.	8	None			4	Year long module
2	1 and 2	EL2131	Core	Language and Literary Studies II	This year-long module will build on students' existing knowledge and language skills and help them further develop the reading, writing, listening and speaking skills acquired from EL1131: Language and Literary Studies I. The module will explore the overarching theme of Self and Conflict through four underlying sub-themes: Man Vs Self, Man Vs Society, Man Vs Man and Man Vs Nature. In Semester 1, students will explore the themes of Man Vs Society and Man Vs Self through a compilation of short prose from Singapore and beyond. Students will enhance their narrative writing skills through the study of advanced literary devices such as foreshadowing, symbolism, irony and internal monologue; as well as by exploring alternative plot structures. For their reading component, students will continue to hone their close and critical reading skills by examining authors' intentions and effects achieved through the use of literary devices in narrative text types. For their project work, students will complete a multimedia literacy project that will develop their skills in factual recounts and pictorial communication. In Semester 2, students will explore the themes of Man Vs Man and Man Vs Nature through a compilation of crime stories. Students will gain a deeper knowledge of crime narratives genre conventions and get the opportunity to generate original crime stories of their own. They will develop a video trailer to promote their stories to an audience of their peers. Students will also expand their reading repertoire by being introduced to expositions where they can reinforce their summary skills and develop an informed and substantiated opinion on issues of relevance to the themes of the module in both the written and oral forms.	6	EL1131			3	Year long module
3	1 and 2	EL3131	Core	Exposition and Argumentation: Community and Society	This year-long module introduces the skills of critical reading and expository writing. Students will learn foundational skills in expository writing—to form claims, substantiate them with ample relevant evidence and elaboration and to put forth a convincing argument. They will be exposed to themes of family, education, youth and the aged through reading material, writing activities and class discussions. This module also focuses on functional texts in real life settings where they get to apply their knowledge of textual and linguistic features to communicate effectively for real world purposes.	6	EL2131			3	Year long module

3	1	EL3231	Elective	Creative Writing	This is an elective module that aims to introduce students to basic structural and textual elements of short fiction and poetry that they are expected to weave into their creative work. This will be done through two strategies. First, the student will do a close reading of both notable works of short fiction and poetry as well as the original manuscripts of peers in workshops. Second, he or she will undergo extensive practice, with the aim of honing divergent and innovative thinking, in the form of regular writing exercises, either take-home or in class. The workshop framework is at the heart of the writing, reading and discussion of creative writing in this module. Selected readings will cover both canonical as well as contemporary creative writing. The student will be given prompts based on the works that have been discussed in class. The best works will be published in the school publication Epiphanies and other journals, as well as entered in competitions.	2	None			1.5	
4	1 and 2	EL4131	Core	Critical Reading and Writing: Social Institutions and Issues	This module is designed as an intermediate course on the essential skills needed for an English Language learner to be fluent and confident in expressing arguments and opinions in an academic and convincing manner. Through the analysis of emerging issues/trends in the mass media; crime and punishment; science and technology; prejudice and discrimination, students will gain a broad and mature understanding of the topics and apply them in specific reading, writing and oral communication tasks. In addition, key controversies arising from social institutions like the family and education will be examined. Other than argumentative essay and reading comprehension components, students will also be assessed through oral presentations and research. Varied sources of texts will be used to broaden content knowledge and promote critical reading and inquiry. This is a year-long module that spans two semesters. In the course of the module, students are encouraged to take a proactive and independent approach in broadening current affairs knowledge.	6	EL3131			3	Year long module
5	1 and 2	EL5131	Core	Critical Reading and Writing 2: The Global Connection	As an intermediate course in the English Language in the senior years, this module seeks to further develop students' fluency and confidence in expressing arguments and opinions about global issues. Through close analysis of emerging global issues as well as the study of political ideologies, international relations and emerging issues on conflicts and security, students will become critically aware of the ongoing and emerging concerns as global citizens.  Students will also examine theoretical views useful for the construction and deconstruction of exposition, persuasion and argumentation in reading, writing, listening and speaking within an academic context, which will develop the students' critical and creative thinking abilities. Other than argumentative essays and application questions, students will also be assessed through oral presentations and research. Varied sources of texts will be used to broaden content knowledge and promote critical reading and inquiry.  This is a year-long module that spans two semesters. In the course of the module, students are encouraged to take a proactive and independent approach towards broadening their current affairs knowledge.	4	EL4131			4	Year long module

5	1 and 2	EL5132	Core	Language for Public Communication	<p>This year-long module focuses on effective communication in the public arena. In Semester 1, students will hone their writing skills by delving into the world of opinion-editorials. The second part of the module in Semester 2 seeks to develop students' understanding and use of language in science communication.</p> <p>Opinionated and yet grounded in facts, opinion-editorials or Op-eds, have the power to persuade readers. In learning to write their own Op-eds, students will be taught the skills needed to develop a strong personal voice. Students will also be taught to appreciate the importance of substantiating their opinions as they craft their op-eds. Apart from learning how to write an Op-ed, students will also learn to objectively evaluate their peer's work. Using the process approach to writing, students will work on their drafts, use the feedback to make improvements before their final submission.</p> <p>Semester 2 starts off with science communication to the lay audience. Students will study the principles of science communication and acquire linguistic strategies in communicating complex ideas in a lucid manner. Through creating and presenting TED talks in science topics, students will acquire content creation and oral delivery strategies to inform, educate, interest and engage lay audience. The second part of Semester 2 relates to science and research presentation to the scientific community. Using their ARP as springboard, students will learn to write a concise and effective abstract, and to present figures diagrams effectively in their research paper and poster.</p>	2	EL4131			2	Year long module
6	1	EL6131	Core	Academic Writing and Reading: Singapore Society	<p>This module aims to provide students with the academic writing and reading skills necessary for the university, and expand their potential as thinkers, writers and communicators. During the semester, they will read a range of academic texts and write literature reviews in response to them. Through these reading and writing assignments, students will explore the interconnectedness of reading and writing, and learn how to use both reading and writing as venues for inquiry, learning, thinking, interpretation, and communication. The theme in focus will be Singapore society. Though academic texts, student will understand some of the issues that define and govern "Singapore" and think critically about them. In addition to reading academic texts and writing academic essays, students will continue to hone their presentation skills as they work on presentation assignments related to the theme.</p>	2	EL5131 and EL5132			2	
6	1 and 2	EL6132	Core	Language for Personal and Professional Communication	<p>This year-long module is divided into two parts. For the first part in Semester 1, students will learn, appreciate and apply literary styles and techniques for creative non-fiction and reflective exposition. Through exposure to reflective expositions and acquisition of techniques for weaving factual events and personal experiences, students will hone their skills as reflective thinkers and engaging communicators. They are also able to apply these skills for their personal essays, interviews and personal statements.</p> <p>The second part of the module focuses on professional communication for the workplace. Students will learn to craft an elevator pitch and a resume</p>	2	EL5131 and EL5132			2	Year long module

					that befit their skills and experience. In addition, they will acquire interview skills, networking and communication etiquette in different contexts.						
6	2	EL6133*	Core	Advanced Academic Reading and Writing: Language and Society	This module considers how language use relates to broader variation in the daily experiences of individuals and groups. Students examine how language constructs social class, gender, and power relations and how these abstractions shape language(s). Students will explore the interaction of language and understand the practical implications of language variation for language policy and language education in multilingual societies such as Singapore. As an academic writing module, the course will focus on the development of basic competencies in academic writing and research. Students will develop skills in data collection, analysis and literature review, and produce an original research paper through process writing. Students will be guided through the critical reading of academic journal articles and learn how to distil and apply relevant information into the creation of new academic knowledge.	2	EL6131			2	*Students have a choice of one module, subject to department's approval
6	2	EL6134*	Core	Understanding Discourse	This module will explore discourse and expose students to frameworks and approaches to analysing it. Different types of discourse can be seen as linguistic representations of particular worldviews. A critical perspective on the analysis of specific discourses, whether oral or written, aims to promote the general awareness that language is used to construct and perpetuate particular viewpoints, and through such linguistic constructions, specific (power) relationships are maintained. By virtue of the fact that discourse involves the situated use of language in relevant sociocultural contexts, it is an orientation that promotes the crossing of disciplinary borders.	2	EL6131			2	*Students have a choice of one module, subject to department's approval
6	2	EL6135*	Core	Introduction to Theory of Knowledge	This module seeks to provide a platform for students to explore the notion of knowledge and to challenge existing assumptions, prejudices and biases that are often present in the process of acquiring and evaluating knowledge. The course is designed to train students to become more aware of the factors that have influenced their perspectives and the perspectives of others, thereby developing a deeper appreciation for alternative points of view as well as to gain a more holistic insight into the world they live in. The module will cover the following areas of knowledge: language, history, human sciences, arts and paradigms. Through the discussion of these areas of knowledge, students will be taught to critically evaluate the various ways of knowing (cognition & logic, sense & perception and emotion etc.) and how they affect their knowledge in the above stated areas. Aside from class participation and journals, students will also be assessed through active independent group projects and oral presentations. This is a semester-long module.	2	EL6131			2	*Students have a choice of one module, subject to department's approval
6	2	EL6136*	Core	Introduction to Linguistics	This is an introductory course to linguistics, which aims to equip students with basic knowledge of phonology, morphology, syntax and semantics.	2	EL6131			2	*Students have a choice of one module, subject to department's approval
6	2	EL6231	Elective	Advanced Creative Writing	This elective module is intended for Year 5 or 6 students who wish to polish their fiction or poetry writing. It will include significant close reading and discussion of notable literary texts, completion of writing assignments and prompts, and peer review workshops. Students are expected to work on their own portfolios of poems, stories or novellas. The workshop framework is at the heart of the writing, reading and discussion of creative	2	None			1.5	

					writing in this module. Selected readings will cover both canonical as well as contemporary creative writing. The best works will be published in the school publication Epiphanies and other journals, as well as entered in competitions.						
--	--	--	--	--	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--	--	--	--	--

## ENGLISH LITERATURE

Through a broad selection of literary texts that include representative works from various genres and periods, the Literature programme aims to:

- Nurture students to be Readers for Life who can appreciate different genres of Literature and its contribution to the human civilisation
- Groom students to be proficient in understanding various literary forms and its features in achieving specific desired ends
- Facilitate students to form perceptive thought and original ideas towards what they read
- Guide students towards an objective, conscious and critical discussion reflective of both emotional and intellectual awareness of themes, characters, settings and contexts
- Develop students to be able communicate and present effectively and convincingly with proper analysis and evaluation in both the written and spoken mode

Foundational Literature is incorporated into the Year 1 and 2's English Language modules, EL1131 and EL2131. These foundational modules are pre-requisites for optional higher-level modules offered in the subject.

Students can opt for Literature as their choice of humanities in Year 2 and 3, and their 4<sup>th</sup> major in Year 4, 5 and 6.

Years 2 and 3 will form the developing stage to the 3 main genres of Literature – Prose, Poetry and Play. For Prose, students will actively engage in the study of Fiction in both the form a Novel and Short Fiction. For Poetry, students will experience a broad selection of poetry from different cultures and eras. Students will also explore both local and international theatre in their study of Play. Each module will be grounded within an over-arching theme as a focal point of exploration for both breadth and depth.

Years 4, 5 and 6 will progress students from developing students of Literature to being advanced students with a richer and more diverse experience of Literature whilst simultaneously rooting them deeper into the study of specific ideas of critical reading and thinking. Students will have to read extensively and intensively representative works of recognised literary merit spanning across different eras, movements and genres. The modules will be categorised according to periods and topics. Their study will culminate in an independent research programme which will take the form of an extended essay. The extended essay will be an investigation into the transformation of literary works either across genres/periods.

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
2	1 and 2	EN2131	Core	Literary Genres I	This is a year-long module to familiarise students with the core Literary genres of Poetry, Prose and Play. Students will study the novel "To Kill A Mockingbird" by Harper Lee and learn about the themes of Prejudice & Discrimination, Fear, Choices and Belonging. They will also consider the bildungsroman aspect of which will deal with ideas of Coming of Age and Change. The module will also cover a Singaporean play "Boom" by Jean Tay, which will engage student to evaluate the advantages and disadvantages of changing times and values as our country hurtles forward in the pursuit of progress and modernity. On top of the novel and play, students will also be enriched through a diverse range of poetry and short story excerpts.	4	EL1131			2	Year long module
3	1 and 2	EN3131	Core	Literary Genres II	This is a year-long module that will expose students to the literary stylistics of the novel and play. Students will study the novel "Haroun and the Sea of Stories" by Salman Rushdie which will immerse them in the world of fantastical storytelling and inspire them to think about how stories shape our identity, kinship, and our society. The module will also introduce students to the world of Shakespearean theatre through Romeo and Juliet where they will immerse themselves in the beauty of Elizabethan language and consider themes such as Love, Loyalty and Trust amongst others. On top of the novel and play, students will also be enriched through a diverse range of poetry and short story excerpts.	6	EN2131			3	Year long module
4	1	EN4131	Core (Major)	Detective Fiction	This semester long module will introduce students to the role and function of the detective figure in selected crime fiction. Students will write informed and persuasive essays to display their interpretation of authors' intentions as well as their engagement with themes/issues within the novels with a discerning selection of persuasive literary evidence. Additionally, students will have to work on an alternative assessments and deliver an oral presentation on one of the module's core texts.	3	A minimum of 'B' grade for EL1131/EL2131/EL3131			3	
4	2	EN4132	Core (Major)	Speculative Fiction	This semester long module will introduce students to the broad spectrum of science fiction and fantasy. Students will write informed and persuasive essays to display their interpretation of authors' intentions as well as their engagement with themes/issues within the novels with a discerning selection of persuasive literary evidence. Additionally, students will have to work on an alternative assessments and deliver an oral presentation on one of the module's core texts.	3	A minimum of 'B' grade for EL1131/EL2131/EL3131			3	
5	1	EN5131	Core (Major)	Shakespearean Tragedy and Comedy	In this module, students will compare and contrast the elements of Tragedy and Comedy in Shakespearean Theatre by studying Macbeth and Twelfth Night. Through a rich and engaging interaction with these plays, they will gain insight into quintessential Elizabethan philosophies such as the Great Chain of Being, Destiny vs Free Will as well as gain insight into social/class hierarchies and gender roles of the time.	4	Year 4 Literature			3	

5	2	EN5132	Core (Major)	20th Century American Literature	In this module, students will study selected works representing 20th Century American Literature and its relevant themes. Students will write informed and persuasive essays to display their interpretation of the authors' intentions as well as their engagement with themes/issues within the novels with a discerning selection of persuasive literary evidence. Additionally, students will have to work on an independent research project by studying a related secondary text of their choice as well as deliver an oral presentation on one of the module's core texts.	4	Year 4 Literature			3	
6	1	EN6131	Core (Major)	Advanced Research in Literature	This is an independent research in literature module that fulfills part of the overall requirement for all literature students majoring in the subject. Students will have to embark on a rigorous research topic of their choice and conduct a thorough literature review. By the end of the module, students will demonstrate a balanced, sound and well-researched evaluation of their selected literary topic/text presented in both the written and oral form.	4	Year 5 Literature			3	Year long module - students will only submit their completed research essay and oral presentation in Semester 2.
6	2	EN6132	Core (Major)	Postcolonial Literature	In this module, students will study selected works representing Postcolonial Literature and its relevant themes. Students will write informed and persuasive essays to display their interpretation of the authors' intentions as well as their engagement with themes/issues within the novels with a discerning selection of persuasive literary evidence. Additionally, students will have to work on an independent research project by studying a related secondary text of their choice as well as deliver an oral presentation on one of the module's core texts.	4	Year 5 Literature			3	

## **Mother Tongue and Foreign Languages**

The Mother Tongue & Foreign Languages Department of NUS High School of Math & Science offers core, elective and enrichment language modules to our students. These modules serve to cater to the varying learning needs of our students from different cultural backgrounds. The department aims to provide our students with the language foundation required for tertiary education, and to develop in them the aptitude for language learning.

The core modules offered are Higher Mother Tongue and Mother Tongue for Chinese, Malay and Tamil. Third Languages, namely French, Japanese, Malay as Third Language and Chinese as Third Language are offered as elective modules. The enrichment modules offered are the Mother Tongue Syllabus B for Chinese, Malay and Tamil.

Modules are offered to students in accordance with their language abilities and interests, and with strict adherence to the national Mother Tongue Policy.

### **The Mother Tongue Policy (MT Requirements for Admission to Local Universities)**

The Mother Tongues (MT) officially refer to Chinese, Malay and Tamil. Under the Mother Tongue Policy, it is compulsory for NUS High students to fulfill either *ONE* of the following MT requirements for admission to the local universities (NUS, NTU, SMU & SUTD):

- a minimum 'D7' grade in the GCE O Level Higher Mother Tongue Examination
- a minimum 'S' grade in the GCE A Level H1 Mother Tongue Examination
- a pass in the GCE A Level Mother Tongue Syllabus B Examination

NUS High students taking

- Higher Mother Tongue will sit for the GCE O Level Higher MT Examination in Year 4.
- Mother Tongue will sit for GCE A Level H1 MT Examination in Year 5.
- Mother Tongue Syllabus B will sit for GCE A Level MT Syllabus B Examination in Year 5.

Students will seek approval from the Ministry of Education (MOE) to take Mother Tongue-in-lieu under the following circumstances:

- Students whose Mother Tongue is a Non-Tamil Indian language can apply to take either Bengali, Gujarati, Hindi, Punjabi or Urdu.
- Returning Singaporeans who have stayed overseas for an extended period of time can apply to take an Asian Language (Arabic, Burmese or Thai) or a Foreign Language (French, German or Japanese).

If students take Mother Tongue in-lieu, the MOE-approved subject will be considered as the Mother Tongue language subject.

Students who are unable to fulfill the MT or MT-in-lieu requirements for admission to local universities but satisfy all other requirements will be admitted on a provisional basis. During the course of under-graduate study, they will be required to attend the MT courses conducted by the university or attain the minimum requirement by retaking the MT paper at the GCE A level Exam before they are allowed to graduate.

Exemption from MTL or MTL-in lieu is granted based only on either of the following stringent conditions:

- Students who are suffering from a specific learning disability such as dyslexia or autism.
- Students who joined Singapore's education system mid-stream.

Parents may apply to MOE for approval of their child's exemption from taking MT or MT-in-lieu through the school. Students who have been exempted from taking MT or MT-in-lieu at the PSLE will continue to be exempted at NUS High School.

Students who are exempted from MT or MT-in-lieu will be deemed to have met the requirements for admission to local universities.

*No student is allowed to drop MTL or MTL-in-lieu unless written approval has been obtained from MOE.*

### **MOTHER TONGUE MODULES (CHINESE/ MALAY/ TAMIL)**

Mother Tongue language modules are offered to students as Core Modules. These core modules are parked under Higher Mother Tongue Language (HMTL) course and Mother Tongue Language (MTL) course, which is a four-year and five-year course respectively. Students will opt for either the Higher Mother Tongue or the Mother Tongue course, based on their eligibility and suitability. Both courses progressively equip students with Mother Tongue proficiency in four main aspects, namely listening, speaking, reading and writing. Upon completion of the four-year Higher Mother Tongue course or the five-year Mother Tongue course, students would have acquired oral presentation skills, listening skills, reading and comprehension skills, as well as essay and summary writing skills at the intermediate level. Upon completion of either course, students are required to sit for the GCE 'O' Level HMTL Exam at end of Year 4 or GCE 'A' Level H1 MTL Exam at end of Year 5.

With approval from MOE, students who offer a Mother Tongue in-lieu at one of the MOE-approved centres will be deemed to have offered the Mother Tongue in-lieu concerned as a core module in our school. For such modules, 'M' is indicated at the end of the module code. For example, BG1531M denotes the module code for Bengali IA (Semester 1) in the case of students taking the Bengali (Non-Tamil Indian Language) module conducted at a MOE-approved centre.

For students who find it difficult to cope with MTL modules, they can opt to take up MTL Syllabus 'B' modules instead. However, approval must be sought from the school before opting for MTL Syllabus 'B' modules and the opting can only be carried out at appropriate stages. MTL Syllabus 'B' modules are offered to students as Enrichment Modules. Upon taking up the MTL Syllabus 'B' course, students are to complete this course and pass GCE A Level MTL 'B' Exam at end of Year 5.

In order to further develop in students the capacity and interest for Mother Tongue languages, the school also offers elective modules to students taking MTL or HMTL course. Elective modules, such as Appreciation of Chinese Language and Culture, Basic Translation Skills, The Math and Science Achievements of Ancient China and Learning Math and Science in Chinese, aim to strengthen the language acquisition of students and develop in them the ability to apprehend the culture associated with the language.

## **FOREIGN/ THIRD LANGUAGE MODULES (FRENCH/ JAPANESE/ CHINESE/ MALAY)**

The school offers French, Japanese, Chinese as 3<sup>rd</sup> Lang and Malay as 3<sup>rd</sup> Lang as Elective Modules. These modules are offered to the following categories of students:

- (1) Having the interest to study a Third Lang on top of their Mother Tongue
- (2) Opting to study French or Japanese as MTL-in-lieu (with approval from MOE)
- (3) Having the interest to study one of these languages purely for interest, even if they are exempted from MTL (this applies to some of the foreign students)

The four-year French and Japanese courses prepare students for DELF (Diploma in French Studies) & JLPT (Japanese Language Proficiency Test) respectively. The four-year Chinese as 3<sup>rd</sup> Lang and Malay as 3<sup>rd</sup> Lang courses equip students with language competencies required for sitting for GCE 'O' Level Chinese/Malay Special Programme even though some of them may not be eligible to sit for these exams.

Upon completion of any of the 4 third language courses mentioned above, students are expected to achieve communicative competence in simple everyday situations and personal interaction in French, Japanese, Chinese or Malay. Having attained this level of learning would indicate that students have acquired the language foundation necessary for advancement to the next level of learning.

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/ wk	Remarks
1	1 and 2	CH1531	Core	Higher Chinese I	This module focuses on equipping students with structural guidelines and rhetorics that will enable them to develop narrative and descriptive writing skills at the Intermediate level. Under the section of interactive writing, students will learn how to write informal emails, discuss current affairs and share personal experiences. Students will acquire browsing and close reading skills that will equip them with the correct answering techniques in reading and comprehension. Through class discussions and group work, students will develop active listening skills and acquire oral and presentation skills.	6	None			3	Year long module
2	1 and 2	CH2531	Core	Higher Chinese II	In this module, students will build on their existing knowledge and skills. Under writing, they will further develop and enhance their skills in descriptive and narrative writing, as well as acquire relevant skills in expository writing. Argumentative writing will also be introduced to hone the students' critical thinking skills. While brushing up on informal emails, they will be introduced to formal emails. Through reading more complex narrative passages, students will learn how to interpret underlying meanings. Through class discussions and group work, students will develop active listening skills and acquire oral and presentation skills. Various platforms will be provided for students to reinforce their oral skills.	6	CH1531			3	Year long module
3	1 and 2	CH3531	Core	Higher Chinese III	The module focuses on equipping students with more advanced writing skills. More emphasis will be given to argumentative writing. In addition, they will also be taught skills in speech writing. Under the section of functional writing, students will continue to brush up on the writing of emails, both formal and informal. In addition, they will be introduced to the writing of blogs and forums, which require critical thinking and analytical skills in response to current affairs. In preparation for national exams, students will be taught summary writing skills as well as correction of ungrammatical sentences. More lesson time will be allocated to oral presentations which will prepare students for their oral report in the exams. Interactive learning will continue to be an important feature of the classroom climate.	8	CH2531			4	Year long module
4	1 and 2	CH4531	Core	Higher Chinese IV	In this module, there will be a continued emphasis on the training of advanced writing skills, with more reference to current affairs. In preparation for national exams at the second half of the year, more time will be allocated to the drilling of summary writing, correction of ungrammatical sentences, answering techniques in comprehension and presentation skills required in oral reports based on video clips.	8	CH3531			4	Year long module
1	1	CL1231	Elective	Chinese as 3rd Language IA	This module is opened to students who have no prior Chinese language background. This module touches on the basics, such as an overview of the evolution of Chinese characters and an introduction to phonetics	3	None			3	

					(the Hanyu Pinyin system). More emphasis will be given to the oral and listening components.						
1	2	CL1232	Elective	Chinese as 3rd Language IB	This module is a continuation of CL1231. At the end of the course, pupils will acquire basic conversational and writing skills in Mandarin. Please refer to Description for CL1231.	3	CL1231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for CL1231 in order to advance to CL1232.
1	1	CL1233	Elective	The Culture behind Chinese Philology	This course introduces the evolution and distinct features of the Chinese characters, painting and calligraphy. The culture and customs behind the characters will also be covered in this course. The objective is to give students better grasp of Chinese Characters, understand Chinese Culture and appreciate the beauty of the language and hence arouse their interest in Chinese Language.	2	None			2	
1	1	CL1234	Elective	The Math and Science Achievements of Ancient China	This module provides insights to the Chinese culture from the achievements through Math and Science. The teacher introduces Math & Science achievements as a context to gain a deeper appreciation of Chinese culture. The lessons cover various Math & Science topics, such as Permutation and Combination, Positional Notation and Non-Euclidean Space. Students are required to access the Chinese online resources to aid in their learning with the guidance of the teacher.	2	None			2	
1	2	CL1235	Elective	Learning Math and Science in Chinese	This module aims to promote the use of Chinese as an everyday language. The teacher guides the students to discuss and articulate various Math & Science concepts, which they have learned from Math & Science lessons. Students are required to access the Chinese online resources through NUS E-database to aid in their learning. Students could also be engaged in online discussion with students from other countries.	2	None			2	
1	1 and 2	CL1331	Enrichment	Basic Chinese I	This module aims primarily to develop oral communication and listening skills through pictorial conversations and audiovisual clips. In addition, students will be taught basic reading skills through short passages.	6	None			3	Year long module
1	1 and 2	CL1531	Core	Chinese I	This module focuses on contextual learning of words and phrases, which form the basics for language acquisition. Reading and comprehension will go hand in hand with the learning of words and phrases. Much emphasis will be given to the acquisition of oral and listening skills, other than the learning of narrative writing skills at the intermediate level. Under the section of functional writing, students will learn how to write informal emails with reference to daily life.	6	None			3	Year long module
2	1	CL2231	Elective	Chinese as 3rd Language IIA	This module is a continuation of CL1232 and it is meant only for students who have completed and passed CL1232. The module emphasises the learning of new vocabularies, the constructing of simple sentences and writing of short compositions. The module also	3	CL1232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next

					aims to equip pupils with comprehension and conversational skills in Chinese.						level. For example, students will be required to attain at least 50% for CL1231 in order to advance to CL1232.
2	2	CL2232	Elective	Chinese as 3rd Language IIB	This module is a continuation of CL2231. Please refer to Description for CL2231.	3	CL2231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for CL1231 in order to advance to CL1232.
2	1 and 2	CL2331	Enrichment	Basic Chinese II	At this level of learning, students will continue to develop their oral communication skills through structural analysis of a conversational topic. Writing skills will be developed further through using common phrases and idioms in pictorial composition as well as sentence construction. Writing of emails will also be introduced.	6	None			3	Year long module
2	1 and 2	CL2531	Core	Chinese II	This module focuses on equipping students with narrative and descriptive writing skills at the intermediate level. Continued emphasis will be given to the acquisition of oral and listening skills. Under the section of functional writing, other than continuing with informal emails that pertain to daily life, students will also learn to discuss and analyse current affairs via emails. More platforms will be provided for students to hone their presentation skills.	6	None			3	Year long module
3	1	CL3231	Elective	Chinese as 3rd Language IIIA	This module is a continuation of Chinese as 3rd Lang Level 2 and it is meant only for students who have completed and passed CL2231 and CL2232. The module will equip students with stronger conversational and writing skills. Comprehension skills will be enhanced with the grasp of Chinese vocabularies. This will be an important preparatory stage for students who intend to sit for the GCE 'O' Level Chinese Special Programme Examination upon completion of the 4 year programme.	3	CL2232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for CL1231 in order to advance to CL1232.
3	2	CL3232	Elective	Chinese as 3rd Language IIIB	This module is a continuation of CL3231. Please refer to Description for CL3231.	3	CL3231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for CL1231 in order to advance to CL1232.
3	1 and 2	CL3331	Enrichment	Basic Chinese III	At this level of learning, students will strengthen their oral communication skills by listening to narrated stories and knowing how to infer and draw conclusions from them. Comprehension skills will also be enhanced through learning how to process and organise information. The ability to write complex sentences with phrases and	6	None			3	Year long module

					idioms will be developed. The writing of narrative essays and emails will be taught in greater depth.						
3	1 and 2	CL3531	Core	Chinese III	This module focuses on equipping students with more advanced writing skills. More emphasis will be given to argumentative and expository writing. Under the section of functional writing, other than informal emails, students will learn to write formal emails. To prepare students for national exams, there will be a greater emphasis on training of oral presentation skills on top of the teaching of writing skills. Reading and comprehension will take precedence over rote learning of words and phrases.	6	None			3	Year long module
4	1	CL4231	Elective	Chinese as 3rd Language IVA	This module is a continuation of Chinese as 3rd Lang Level 3 and it is meant only for students who have completed and passed CL3231 and CL3232. The module will serve to enhance students' conversational and writing skills, comparable to the standards required for the year-end GCE 'O' Level Chinese Special Programme Exam.	3	CL3232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for CL1231 in order to advance to CL1232.
4	2	CL4232	Elective	Chinese as 3rd Language IVB	This module is a continuation of CL4231. Please refer to Description for CL4231. Completing this module marks the completion of the entire programme (level 1 to level 4).	3	CL4231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for CL1231 in order to advance to CL1232.
4	1	CL4233	Elective	Appreciation of Chinese Language and culture I	The module will involve the following: Drama and Debate training, Watching and studying various debate competition involving different teams as part of the debate training, Literature appreciation, Cultural visiting and Exchange Program, Enhancing creativity.	2	None			2	
4	2	CL4234	Elective	Appreciation of Chinese Language and Culture II	This module is a continuation of CL3231. It will continue to provide students with the relevant platforms of learning and necessary guidance. Consolidation of learning will take place so as to ensure learning objectives can be met.	2	None			2	
4	1 and 2	CL4331	Enrichment	Basic Chinese IV	At this level of learning, students will be taught critical thinking skills, which will be used in enhancing their oral communication skills. Students will continue to sharpen their writing skills by constructing complex sentences and learning how to write argumentative essays. The scope of emails will also include current affairs, hence requiring students to be objective and analytical.	6	None			3	Year long module
4	1 and 2	CL4531	Core	Chinese IV	In this module, the training of argumentative and expository writing skills will continue to be the main focus. To equip students for national exams, more lesson time will be allocated to oral presentations. Interactive learning will continue to be an important feature of the	8	None			4	Year long module

					classroom climate. Reading and comprehension will take precedence over rote learning of words and phrases. Students will also be introduced to basic summary skills to prepare them for H1 Chinese in Year 5.						
5	1	CL5231	Elective	Topics on Chinese Literature	This module aims to arouse interest and improve capacity in appreciating and appraising literature through the introduction of the highlights and excerpts of ancient and modern China and local literature.	2	None			2	
5	2	CL5232	Elective	Basic Translation Skills	This module aims to progressively equip students with the fundamental translation skills. The contents include fundamental concept of translation, the differentiation between the command and grasp of English and Chinese language, the translation of phrases, sentences, articles or advertisements.	2	None			2	
5	1 and 2	CL5331	Enrichment	Basic Chinese V	To better prepare students for the oral presentation segment in the national exams, students will be taught critical thinking skills at a higher order. This will be useful in conversations that require reasoning and analytical skills. The writing of argumentative essays will be the focus for developing writing skills.	6	None			3	Year long module
5	1 and 2	CL5531	Core	Chinese V	This module will equip students with the necessary skills to prepare for their oral report during the national exams. Other than honing oral presentation skills, students will develop more advanced reading skills so as to have a deeper understanding of the text. In addition, students will be taught how to write complex narrative and argumentative essays to further develop their competency in writing.	8	None			4	Year long module
1	1	FR1231	Elective	French as 3rd Language IA	This module is opened to those who have no prior French language background. The course fee per month is \$100 and charged for the WHOLE Semester (Jan – Jun). This module focuses on basic linguistic and communicative structures of the French language. By developing the four skills of listening, speaking, reading and writing as well as teaching basic grammar and vocabulary, it aims at helping students achieve communicative competence in simple everyday situations and personal interaction. The course also attempts to help students optimise their learning by teaching strategies for language learning and language use. Audio and video materials are used. The course provides an insight into French culture. Sessions are interactive.	3	None			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for FR1231 in order to advance to FR1232. **For students taking French as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as FR1531 (and not FR1231).
1	2	FR1232	Elective	French as 3rd Language IB	The course fee per month is \$100 and charged for the WHOLE Semester (Jul - Dec). This module is a continuation of FR1231. Please refer to Description for FR1231.	3	FR1231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for FR1231 in order to advance to FR1232. **For students taking

											French as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as FR1531 (and not FR1231).
2	1	FR2231	Elective	French as 3rd Language IIA	The course fee per month is \$100 and charged for the WHOLE Semester (Jan - Jun). This module focuses on basic linguistic and communicative structures of the French language. By developing the four skills of listening, speaking, reading and writing as well as teaching basic grammar and vocabulary, it aims at helping students achieve communicative competence in simple everyday situations and personal interaction. The course also attempts to help students optimise their learning by teaching strategies for language learning and language use. Audio and video materials are used. The course provides an insight into French culture. Sessions are interactive.	3	FR1232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for FR1231 in order to advance to FR1232. **For students taking French as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as FR1531 (and not FR1231).
2	2	FR2232	Elective	French as 3rd Language IIB	The course fee per month is \$100 and charged for the WHOLE Semester (Jul - Dec). This module is a continuation of FR2231. Please refer to Description for FR2231.	3	FR2231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for FR1231 in order to advance to FR1232. **For students taking French as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as FR1531 (and not FR1231).
3	1	FR3231	Elective	French as 3rd Language IIIA	The course fee per month is \$100 and charged for the WHOLE Semester (Jan - Jun). This module focuses on basic linguistic and communicative structures of the French language. By developing the four skills of listening, speaking, reading and writing as well as teaching basic grammar and vocabulary, it aims at helping students achieve communicative competence in simple everyday situations and personal interaction. The course also attempts to help students optimize their learning by teaching strategies for language learning and language use. It provides an insight into French culture. As such, the module code will be reflected as FR1531 (and not FR1231).
4	2	FR4232	Elective	French as 3rd Language IVB	The course fee per month is \$100 and charged for the WHOLE Semester (Jul – Dec). This module is a continuation of FR4231. Please refer to Description for FR4231. Completing this module marks the completion of the entire programme (level 1 to level 4).	3	FR4231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for FR1231 in order to advance to FR1232. **For students taking French as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as FR1531 (and not FR1231).
1	1	JP1231	Elective	Japanese as 3rd Language IA	This module is opened to students who have no prior Japanese language background. The course fee per month is \$100 and charged for the WHOLE Semester (Jan - Jun). The goal of this module is to	3	None			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in

					acquire communication skills in the Japanese language in order to interact with native speakers of Japanese in a culturally appropriate manner. Students will also learn how to read and write simple texts in hiragana and katakana. By the end of the semester, students should be able to make simple greetings, introduce people, communicate while shopping, ask for information such as time, prices etc., ask for directions, and invite people.						order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
1	2	JP1232	Elective	Japanese as 3rd Language IB	The course fee per month is \$100 and charged for the WHOLE Semester (Jul - Dec). This module is a continuation of JP1231. Please refer to Description for JP1231.	3	JP1231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
2	1	JP2231	Elective	Japanese as 3rd Language IIA	The course fee per month is \$100 and charged for the WHOLE Semester (Jan - Jun). This module builds upon the basis of Japanese Level 1 and aims to develop basic linguistic and socio-cultural skills to expand the repertoire of the daily topics and situations with simple structures. Approximately 110 kanji and 180 kanji-words will be introduced. While more emphasis is placed on the development of oral communication skills, students will also learn how to read and write simple and short compositions.	3	JP1232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
2	2	JP2232	Elective	Japanese as 3rd Language IIB	The course fee per month is \$100 and charged for the WHOLE Semester (Jul - Dec). This module is a continuation of JP2231. Please refer to Description for JP2231.	3	JP2231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in

											lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
3	1	JP3231	Elective	Japanese as 3rd Language IIIA	The course fee per month is \$100 and charged for the WHOLE Semester (Jan - Jun). Building upon the basis of Japanese Level 2 (JP2231 & JP2232), this module develops students' ability to communicate and expands the repertoire of daily topics and situations. Complex structures such as transitive and intransitive, conditionals and passive forms are introduced. Approximately 150 kanji and 200 kanji - words will be introduced. With this knowledge of characters, student s will be able to understand and write simple and short essays.	3	JP2232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
3	2	JP3232	Elective	Japanese as 3rd Language IIIB	The course fee per month is \$100 and charged for the WHOLE Semester (Jul - Dec). This module is a continuation of JP3231. Please refer to Description for JP3231.	3	JP3231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
4	1	JP4231	Elective	Japanese as 3rd Language IVA	The course fee per month is \$100 and charged for the WHOLE Semester (Jan - Jun). Building upon the basis of Japanese Level 3 (JP3231 & JP3232), this module aims to further develop students' communication skills in Japanese on daily topics of general interests. The module has a special focus on polite expressions which enables students to communicate appropriately in academic and business situations. Appropriately 150 kanji and 200 kanji-words will be introduced. With this knowledge of characters, students will be able to understand letters with fairly formal written language. This module will complete the four year course of elementary Japanese and will equip students with good foundation to progress to intermediate and advance levels of Japanese studies.	3	JP3232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
4	2	JP4232	Elective	Japanese as 3rd	The course fee per month is \$100 and charged for the WHOLE Semester (Jul - Dec). This module is a continuation of JP4231. Please	3	JP4231			3	*Pre-requisites refer to students having to pass the module by

				Language IVB	refer to Description for JP4231. Completing this module marks the completion of the entire programme (level 1 to level 4).						attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for JP1231 in order to advance to JP1232. **For students taking Japanese as Mother Tongue in lieu, this module will be regarded as a core module. As such, the module code will be reflected as JP1531 (and not JP1231).
1	1 and 2	MH1531	Core	Higher Malay I	This module aims to equip students with strong communication skills, acquire and disseminate information effectively and generate ideas through the use of the Malay language. It also aims to deepen students' understanding and appreciation of the Malay language, history and culture. There will be emphasis on building strong communication skills, critical-thinking and problem-solving, more lesson time will be allocated to oral presentations and debate sessions.	6	None			3	Year long module
2	1 and 2	MH2531	Core	Higher Malay II	In this module, students will be exposed to literature, which include poetry, plays, essays, biography, and autobiography. This module focuses on the development of skills in expository and persuasive writing.	6	MH1531			3	Year long module
3	1 and 2	MH3531	Core	Higher Malay III	This module aims to equip students with a higher order of critical thinking skills. As such, language skills acquisition at this level will be deeply entrenched on students' reasoning skills. More lesson time will be allocated to oral presentations which will prepare students for their oral report in the exams. Interactive learning will continue to be an important feature of the classroom climate.	8	MH2531			4	Year long module
4	1 and 2	MH4531	Core	Higher Malay IV	This module continues to equip students with language acquisition skills through the use of critical thinking skills. There will be a continued emphasis on the training of advanced writing skills, with more reference to current affairs and controversial topics. In preparation for national exams at the second half of the year, more time will be allocated to the drilling of summary writing, correction of ungrammatical sentences, answering techniques in comprehension and presentation skills required in oral reports based on video clips.	8	MH3531			4	Year long module
1	1	ML1231	Elective	Malay as 3rd Language IA	This module is opened to students who have no prior Malay language background. This module aims to equip pupils with the skills of understanding standardised spoken Malay language. At the end of the program (i.e. at the 4th level), students should be able to converse fluently in Malay language on common everyday situations that people might talk about as well as being understood by native speakers. In this module, students will acquire language skills through participation in various communicative and written tasks. Through the exposure to the language, students will develop a general understanding of the	3	None			3	

					Malay culture, the sociolinguistic and pragmatic aspects of the language. They will be given exposure to simple poetry and prose.						
1	2	ML1232	Elective	Malay as 3rd Language IB	This module is a continuation of the skills developed in Semester One. Oral and listening skills will continue to be emphasised in this module. Communicative skills will be garnered through various forms, such as role-plays, skits, short speeches, etc. Reading and writing skills will be exposed to them as well. Grammar aspects will continue to be taught through interactive approach.	3	ML1231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for ML1231 in order to advance to ML1232.
1	1 and 2	ML1331	Enrichment	Basic Malay I	This module focuses on contextual learning of words and phrases, which form the basics of language acquisition. Reading and comprehension will go hand in hand with the learning of words and phrases. Much emphasis will be given to the acquisition of oral and listening skills.	6	None			3	Year long module
1	1 and 2	ML1531	Core	Malay I	This module aims to equip students with effective communication skills, acquire and disseminate information and generate ideas through the use of the Malay language as well as appreciate and understand various forms of Malay cultures. Much emphasis will be given to the acquisition of oral and listening skills. Under the section of functional writing, students will learn how to write personal emails with reference to daily life.	6	None			3	Year long module
2	1	ML2231	Elective	Malay as 3rd Language IIA	This module will build on the skills of ML1232. Students will be able to understand main contents of essays, poetry and prose. They will also be able to produce various forms of writing skills which evolve around common everyday situations and current affairs through various writing structures and styles. This course also aims to provide understanding and awareness of the traditions and cultures of the Malay community which indirectly will help the students find its relevance to their own culture.	3	ML1232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for ML1231 in order to advance to ML1232.
2	2	ML2232	Elective	Malay as 3rd Language IIB	This module will build on the skills taught in Semester One. Pupils will continue to be exposed to understand various forms of writing skills. Emphasis will also be given to their reading fluency and pronunciations. Educational trips (such as home stay) may also be embarked upon, to enhance their interest and to provide deeper understanding and awareness of the traditions and cultures of the Malay community.	3	ML2231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for ML1231 in order to advance to ML1232.
2	1 and 2	ML2331	Enrichment	Basic Malay II	This module focuses on expanding the use of vocabulary words through oral presentations, group work and individual assessments. There will also be an active use of mobile technology to enhance and encourage students' acquisition of the language skills. Students will continue to be exposed to various forms of media to enhance their current knowledge on the Malay language and culture.	6	None			3	Year long module

2	1 and 2	ML2531	Core	Malay II	This module emphasizes on honing the students' grammar skills. Students will be exposed to developing figurative and evaluative language, developing the noun group using adjectival phrases as well the noun-verb relationship: subject-verb agreement. Continued emphasis will be given to the acquisition of oral and listening skills. Under the section of functional writing, other than continuing with personal emails that pertain to daily life, students will also learn to discuss and analyse current affairs via email. More platforms will be provided for students to hone their presentation skills.	6	None			3	Year long module
3	1	ML3231	Elective	Malay as 3rd Language IIIA	This module will build on the skills of ML2232. Pupils will be more exposed in their four language skills of listening, speaking, reading and writing. It also aims to provide the pupils with more communicative competence in simple everyday situations and personal interaction. As with the other earlier modules, this course also aims to provide an understanding and awareness of the traditions and cultures of the Malay community which will help the students appreciate the learning of the language.	3	ML2232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for ML1231 in order to advance to ML1232.
3	2	ML3232	Elective	Malay as 3rd Language IIIB	This module is a continuation of the skills developed in Semester One. Pupils will continue to be exposed in their four language skills of listening, speaking, reading and writing. It also aims to provide the pupils with more communicative competence in simple everyday situations and personal interaction. In this semester, pupils' understanding and awareness of the traditions and cultures of the Malay community will be enhanced through experiential learning, such as Learning Journeys.	3	ML3231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for ML1231 in order to advance to ML1232.
3	1 and 2	ML3331	Enrichment	Basic Malay III	This module aims to give more emphasis in developing students' functional writing skills. Various forms of reading and writing materials will be introduced to the students. Students will be guided to work on their writing skills, to understand, analyze and be able to develop substantial reasoning in their work.	6	None			3	Year long module
3	1 and 2	ML3531	Core	Malay III	This module focuses on equipping students with more advanced writing skills. More emphasis will be given to argumentative and expository writing. Under the section of functional writing, other than informal emails, students will learn to pen formal emails. To prepare students for national exams, there will be a greater emphasis on training of oral presentation skills, on top of the teaching of writing skills.	6	None			3	Year long module
4	1	ML4231	Elective	Malay as 3rd Language IVA	This module is critical in enhancing holistic learning for the pupils. A more rigorous and comprehensive approach will be adopted throughout the whole semester. At this stage, pupils are expected to have a sound mastery of the four language skills of listening, speaking, reading and writing. Applying all of these language skills at a higher level in their presentations and projects are among the pre-requisites of this module.	3	ML3232			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for ML1231 in order to advance to ML1232.

4	2	ML4232	Elective	Malay as 3rd Language IVB	As the final module of the 4-year programme, pupils will be further equipped with all the essential skills that are required for higher learning. They are further exposed to various tools of communication, both formal and informal. Understanding the culture and society goes beyond speaking the language but immersing oneself in it and appreciating the culture as a whole. At this stage, pupils will gain more exposure into the language, culture and lifestyle of the Malay community, local and beyond for further insights. Completing this module marks the completion of the entire programme (level 1 to level 4).	3	ML4231			3	*Pre-requisites refer to students having to pass the module by attaining at least 50% (overall) in order to advance to the next level. For example, students will be required to attain at least 50% for ML1231 in order to advance to ML1232.
4	1 and 2	ML4331	Enrichment	Basic Malay IV	This module aims to enhance the students' proficiency in their essential language skills. They should be able to articulate in 'Bahasa Baku' (standard Malay), with much clarity and fluency. At this stage, students will continue to develop their writing skills, and be prepared for the national examination.	6	None			3	Year long module
4	1 and 2	ML4531	Core	Malay IV	This module aims to develop students' writing skills at a more advanced level. Students will also be further exposed to critical thinking skills in both oral and writing assessments. To equip students for their national exams, more lesson time will be allocated to oral presentations based on video clips and debate sessions. Interactive learning will continue to be an important feature of the classroom climate.	8	None			4	Year long module
5	1 and 2	ML5331	Enrichment	Basic Malay V	This module aims to further develop students' language skills as they are now more exposed to the various language genres. This module will introduce students to current issues. Students will be given the opportunity to work on their language skills through various forms of assessments, such as peer-critic, group work as well as individual project presentations. This module will also continue to expose students to the Malay culture and arts.	6	None			3	Year long module
5	1 and 2	ML5531	Core	Malay V	This module focuses on enhancing students' knowledge and grasping broader concepts of current issues as the curriculum covers a wide range of topics which require students' depth of knowledge in these issues. Focus will be on exposing students to concepts through analysis of newspaper and magazine articles, as well as through social media. Various platforms will be provided for students to reinforce their oral skills.	8	None			4	Year long module
1	1 and 2	TH1531	Core	Higher Tamil I	This module helps to develop students' reading, writing, listening and speaking skills needed to become effective users of the Tamil language. This module enhances students' vocabulary through quizzes, marabuthodargal, enaimozhigal, uvamaithodargal and proverbs. Students will learn to write informal emails, descriptive and narrative essays. Students will deepen their understanding of their culture through doing project work.	6	None			3	Year long module

2	1 and 2	TH2531	Core	Higher Tamil II	This module helps to strengthen the students' communication skills. Students will learn to write formal emails and comments in the web forum. They will further develop and enhance their descriptive and narrative writing skills. Argumentative writing will also be introduced to hone the students' critical thinking skills. Through classroom discussions and group work, students will develop active listening skills and acquire oral and presentation skills. Various platforms will be provided for students to reinforce their oral skills.	6	TH1531			3	Year long module
3	1 and 2	TH3531	Core	Higher Tamil III	This module focuses on equipping students with more advanced writing skills. More emphasis will be given to argumentative and expository writing. This module emphasis more on summary writing, comprehension writing skills and more practice will be given on cloze passage and text editing. Students will also learn through various modes of instructions such as classroom discussions, debates, project presentations and peer critiques.	8	TH2531			4	Year long module
4	1 and 2	TH4531	Core	Higher Tamil IV	This module will further refine students' comprehension and summary writing skills. The overall aim of this module is to reinforce students' speaking, reading, listening and writing skills. More practice will be given based on the exam components. At the end of the module, students should be proficient in the speaking, reading, and writing of Tamil language, as well as in their listening skills.	8	TH3531			4	Year long module
1	1 and 2	TL1331	Enrichment	Basic Tamil I	This module aims to develop students' reading, listening and speaking skills that are needed to become effective users of the Tamil language. Students will learn to write informal emails and provide their comments or opinions in the web forum. Students will deepen their understanding of their culture through doing project work.	6	None			3	Year long module
1	1 and 2	TL1531	Core	Tamil I	This module aims to develop students' reading, writing listening and speaking skills that are needed to become effective users of the Tamil language. Through marabhuthodargal and enaimozhigal students will learn and understand the language in depth. This module will also equip students with narrative writing skills at the intermediate level. Students will learn to write informal emails with reference to daily life.	6	None			3	Year long module
2	1 and 2	TL2331	Enrichment	Basic Tamil II	This module helps to strengthen the students' communication skills. Students will further develop their speaking and listening skills. They will continue to work on improving their writing skills pertaining to informal email and web forum comments. Through classroom discussions and group work, students will develop active listening skills and acquire oral and presentation skills.	6	None			3	Year long module
2	1 and 2	TL2531	Core	Tamil II	This module aims to help the students develop their reading, writing, listening and speaking skills needed to become effective users of the Tamil language. Through marabhuthodargal, enaimozhigal, uvamaiththodargal and proverbs, students will learn and understand the language in depth. This module develops and further enhances students with narrative and descriptive writing skills. They will also learn to write emails with reference to current affairs.	6	None			3	Year long module

3	1 and 2	TL3331	Enrichment	Basic Tamil III	This module focuses on equipping students with more advanced oral skills. More emphasis will be given to listening and speaking skills. In this module, more practice will be given on cloze passages and reading comprehension. Students will also learn through various modes of instructions such as classroom discussions, project presentations and peer critiques. Email writing and giving comments in the web forum will be taught in greater depth. Students will be given opportunities to develop their public speaking skills through oral presentation.	6	None			3	Year long module
3	1 and 2	TL3531	Core	Tamil III	This module focuses on equipping students with more advanced writing skills, such as argumentative and expository writing. Along with email writing, students will learn to write their comments or opinions in the web forum. There will be more practice on cloze passages and sentence completions. Students will be given opportunities to develop their public speaking skills through oral presentations in the classroom.	6	None			3	Year long module
4	1 and 2	TL4331	Enrichment	Basic Tamil IV	This module will further refine students' speaking and listening skills. More practice will be given based on the exam components. Under functional writing, students will have more practice on email writing and web forum writing. More practice will be given to prepare the students to sit for the national examination.	6	None			3	Year long module
4	1 and 2	TL4531	Core	Tamil IV	This module focuses more on sharpening the students' writing skills. This module helps to develop students' argumentative and expository writing skills at the advanced level. Under functional writing, students will have more practice on email writing and forum writing. Students will be given opportunities to develop their public speaking skills through the oral presentation in class. More practice will be given to prepare the students for the national examination.	8	None			4	Year long module
5	1 and 2	TL5331	Enrichment	Basic Tamil V	This module aims to improve the students' students' reading, writing, listening and speaking skills needed to become effective users of the Tamil language. Students will be drilled on their oral presentation skills, writing skills and the use of technology to better prepare them for the national examination.	6	None			3	Year long module
5	1 and 2	TL5531	Core	Tamil V	This module aims to improve the students' communication skills through in-class presentations, debates and discussions on essays topics. Students will be taught to write complex narrative and argumentative essays to further develop their writing skills. They will learn the command of the language in more depth through the more advanced marabhuthodargal, enaimozhigal and uvamaiththodargal. They will also learn sorpunarchi.	8	None			4	Year long module

## **Humanities**

The Humanities Curriculum at NUS High School aims to nurture our students into world-ready learners with humanitarian values. Students will have an appreciation and sustained interest in the world around them. They will also be adept at thinking critically and inventively, inspiring multiple and varied possibilities for the betterment of our community and society.

The Department offers a choice of three subject disciplines – History, Geography and Economics. Students will gain an introduction to the three independent disciplines by means of an Integrated Humanities course of study. They shall then have the option of pursuing either History or Geography in Years 2 – 3; and History, Geography or Economics in Years 4 - 6.

### **Integrated Humanities**

The Integrated Humanities curriculum serves to lay the foundation for the three Humanities disciplines taught by the Department. Concepts and skills fundamental to the respective disciplines are imparted to prepare students holistically to manage the subjects at higher levels.

### **History**

The History curriculum at NUS High School aims to provide students with a broader worldview and a better understanding of present global trends and international relations through a contemporary study of regional and international developments in the twentieth century. It highlights the importance of understanding and interpreting history in all its complexity – its people, events, developments and issues are explored in a historical context and examined from a range of perspectives. It enables students to better understand how the world they live in is shaped by the historical forces of the recent past.

The curriculum adopts a multi-faceted approach, and is designed around knowledge that is enduring and is organised around key themes and concepts or the “Big Ideas” that will guide students’ thinking and the learning outcomes. Constructivist teaching is emphasized which focuses on developing students to be active learners, as they engage in the learning to construct their own meanings.

### **Geography**

The Geography curriculum is designed to manifest the dynamism of the subject as students study the interactions between man and the environment over time and space at the local, regional and global scales. It integrates both physical and human geography, and provides for the acquisition of scientific and socio-economic methodologies.

The curriculum focuses on the study and investigation of cause-effect relationships between man and the environment through the identification of trends and patterns, and the processes behind them. This is followed by the subsequent investigation into the adaptations, measures and management strategies meant to cope and deal with these interactions. Through the use of relevant named examples and case studies, the curriculum ensures that the consideration of varied perspectives, ideas and views is inherent in the curriculum. The Geography

curriculum thus aims to develop in our students the values and attitudes of responsible citizens of an increasingly interconnected world. It will also strive to motivate them to reach a level of personal commitment to resolve the issues at different scales.

## **Economics**

The study of Economics aims to provide students a broad understanding of national and international economic issues and challenges them to think critically through experiential learning and research. It aims to challenge students to investigate the economic issues on strategies of firms, efficiency, market failure and macroeconomic developments in the regional and international economies. Students will examine real world case studies; provide economic insights and conduct research and explore alternatives to achieve key economic goals.

Economics as a social science will broaden students' thinking as they examine human behaviour in response to changes and the way decisions are being made. Economics has a vital role to play in promoting international cooperation and mutual understanding because of its focus on global issues. To achieve this understanding, students will need to learn to consider economic theories, ideas, and events from the points of view of different stakeholders in the world economy.

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1 and 2	HU1131	Core	The Singapore Experience I	<p>This module focuses on the themes “Living in a Diverse Society” and “Exploring Citizenship and Governance”. The journey towards independence and nation building of Singapore will be taught and reinforced in order to appreciate the content covered in the 2 themes in this module. Students build upon what they have already learnt in primary school about Singapore’s independence and nation building journey. The emphasis of content rests upon drawing a strong connection between nation building and the second theme in the Social Studies syllabus which explores the importance of good governance and citizenship.</p> <p>In examining the first theme, students will explore the different factors shaping diversity in society. They will find out how Singapore has grown as a diverse society, and understand the impacts of different responses as people of different backgrounds interact. In examining the second theme, students will introduced to the complexity of citizenship and that different groups of people in society have competing needs and interests; managing these will require trade-offs. Students will find out that both citizens and government can play complementary roles in working for the good of the society. Students will also look at the role of governments in responding to the opportunities and challenges in diverse societies and how these shape harmony in society.</p>	4	None			2	Year long module
2	1	GE2131	Core	Geography Studies I	<p>This is the first Geography module for all students at Year 2. In Semester 1, students cover the physical geography topic on weather and climate and the learning of map reading skills, essential data interpretation skills and fieldwork techniques. The module is designed to develop understanding of Earth’s physical processes and to appreciate the interconnectedness of earth’s systems. It also explores how people and the environment relate to each other in terms of weather conditions and weather hazards, and the actions and responses to tackle the challenges of extreme weather conditions. To engage students in deeper learning and to encourage more inquiry, fieldwork involving the use of weather instruments to gather weather data, and the calculations and representation of weather data are key components in the module. Besides the content coverage on the topic of weather and climate, the module also focuses on the acquisition of basic topographical map skills and the interpretation of physical and human environments from maps, as well as selected data representation methods.</p>	2	HU1131			2	
2	2	GE2132	Core	Geography Studies II	<p>This is the second Geography module for all students at Year 2. In Semester 2, students cover the human geography topics on population dynamics and urban development, and global tourism. In population dynamics, students learn about population structures and gain a deeper understanding of factors contributing to demographic changes in a country or region over time. The relationship between population change and the overall economic</p>	2	GE2131			2	

					development of a country will be studied and discussed, using relevant named examples. In urban development, students explore the concepts of urbanisation and urban growth, as well as the benefits and challenges of urban development. The urban problems of pollution, congestion, housing and water will be discussed and the measures to deal with them evaluated. Students finish the module with the topic on global tourism. In this topic, they focus on understanding how global tourism is a global phenomenon, the factors contributing to its growth as well as the impacts of tourism. The case study on the development of Amazon Basin will serve to sum up the module by looking at how the natural environment is being modified, for better or for worse, in the name of economic development. As students explore the topics in the module, the distinction between the developing and the developed countries should serve to drive the message that there is no one-size-fits-all models, and students gain a deeper appreciation on the complexities of decision making.						
2	1 and 2	HU2131	Core	The Singapore Experience II	This module focuses on the theme “Being Part of a Globalised World”; it seeks to explore multiple perspectives on the impacts of globalisation in three areas: economy, culture and security. Students will learn how the uneven impacts in each of these three areas result in tensions and trade-offs which can help them better understand the complex nature of globalisation. Students will also discover how these impacts lead to different responses from countries, companies and individuals. The different responses and trade-offs mean that the tensions will continue to remain and shape debates and policy-making. Students will also cover the racial riots of Singapore in this module as it reinforces the importance of continual efforts towards strengthening cohesion within the society.	2	HU1131			1	Year long module
2	1	HY2131	Core	History Studies I	This module focuses on the history of Southeast Asia (European dominance and expansion in the late 19th century). The module allows students to explore the reasons and processes of European colonisation in Southeast Asia, in particular Dutch (Indonesia), French (Vietnam) and British (Malaya/Singapore). Students will also gain a thorough understanding of the impact of colonisation on Southeast Asia as well as the legacy left behind by the Europeans. Much of these legacies are still being seen in today’s society which has shaped the nation’s political regime as well as social/cultural norms.	2	HU1131			2	
2	2	HY2132	Core	History Studies II	This module focuses on the history of the 20th century world (Themes of revolution, nationalism, imperialism, authoritarianism; events leading WWII). This module explores the epic history of Russia and Germany and how the leaders with different ideology shaped the progress of their respective nations. Though the main focus of the module is on political developments, the module allows students to look in some depth at the social, economic and cultural history of the period, as well as the military history of Russia’s and Germany’s involvement in World War I and World War II. The module concludes with an examination of the importance of	2	HY2131			2	

					leadership played by the leaders in past and present as well as the impact on today's society.						
3	1	GE3131	Core	Geography Studies III	<p>This module focuses on specific physical geography topics on coasts and plate tectonics as well as the management of hazards.</p> <p>A. Coasts</p> <ol style="list-style-type: none"> <li>1. Coastal Processes</li> <li>2. Coastal Features and Landforms</li> <li>3. Coastal Management</li> </ol> <p>B. 					c.Managing current and future spread of infectious diseases i.Understanding the factors affecting the spread of infectious diseases ii.Understanding stakeholders through patterns of spread of diseases						
3	1	HY3131	Core	History Studies III	This module examines the issues and conflicts during the Cold War era in Europe and its impact on the world order in the post 1945 years. It also covers problems and events leading to the collapse of communism in Eastern Europe and the Soviet Union.  A. A New Era of International Relations 1. Outbreak and Developments of the Cold War 2. Escalation of the Cold War: The role of Science and Technology in Space Development and Arms Race, Cuban Missile Crisis and Korean War 3. Effects of Cold War Conflicts on the World  B. Weaknesses of the Command Economy and Communist System 1. Gorbachev's Reforms and his "New Thinking" 2. Reasons for the Collapse of Communism and Breakup of the Soviet Empire	3	HY2132			3	
3	2	HY3132	Core	History Studies IV	This module focuses on the decolonisation and emergence of nation-states in Southeast Asia. Two case-studies of Malaya and Vietnam/Indonesia will be used to examine key factors that shaped the differing pathways and influence the struggles for independence of the countries. An awareness of the countries' historical developments will provide students with a better understanding of present-day issues that are unique to the region.  A. Decolonisation and emergence of Southeast Asia 1. Struggles for independence in Southeast Asia states in the post-WWII period  B. Case study of Malaya 1. Re-establishment of British Rule and local responses 2. Establishment of independent Malaya  C. Case study of Vietnam OR 1. Attempts by French to re-establish French rule and local responses 2. Reunification and establishment of independent Communist Vietnam  D. Case study of Indonesia 1. Attempts by Dutch to re-establish Dutch rule and local responses 2. Establishment of independent Indonesia	3	HY3131			3	
4	1	EC4131	Core (Major)	Economic Insights I	This module introduces introduces the central problem of economics and trains students on the use of demand and supply concepts to analysis markets. This module also provides the foundation of the theory of the firms and the spectrum of market competition. Students will apply various theories to analyse the behaviour of firms in different market structures and	4	None			3	

					<p>explore the effects of these behaviour on efficiencies and society's welfare.</p> <p>1.Introduction to Economics</p> <p>2.Scarcity, Choice &amp; Opportunity Cost</p> <p>3.Demand and Supply a.Demand and Supply b.Market Equilibrium c. Elasticities</p> <p>4.Firms a.Cost and Revenue b.Firm's Objectives c.Firm's Decisions and Strategies</p>						
4	2	EC4132	Core (Major)	Economic Insights II	<p>This module introduces students to Macroeconomics. Students will be equipped with the tools which economists use to describe and explain the macroeconomy. Students will investigate the reasons behind macroeconomic problems and explain the policies governments conduct to resolve these policies. Students will also explore the reasons for trade, and despite the benefits of trade, why countries still adopt protectionism.</p> <p>1.Macroeconomic Objectives and Indicators</p> <p>2.Income Determination Analysis</p> <p>3.Macroeconomic Problems</p> <p>4.Macroeconomic Policies</p> <p>5.Reasons for Trade</p> <p>6.Protectionism</p>	4	None			3	
4	1	GE4131	Core (Major)	Geography Insights I	<p>This module covers 2 main topics – (1) Fluvial Geomorphology and Hazard Management, and (2) Denudation and Mass Movements.</p> <p>In (1), the topic focuses on the interactions between man and the environment in the study of fluvial geomorphology and hazard management. Beginning with studying the drainage basin as a system, students learn how rivers work towards dynamic equilibrium through the fluvial processes of erosion, transportation and deposition as well as the factors influencing these processes. Students also examine flow and channel characteristics in influencing stream development and their related features and landforms. This topic ends off with a study on river management in the Mississippi River Basin and critically examine the impacts of man's modification of the natural environments and the attempts to control the forces of nature through hard</p>	4	None			3	

					and soft engineering. In (2), students study the geomorphic processes of weathering, erosion and mass movement, and the role they play in landform and slope development. Finally, it looks at landform evolution on selected rock types (granite & limestone) under different climatic conditions (temperate & humid tropical regions).						
4	2	GE4132	Core (Major)	Geography Insights II	The module begins with recognising and understanding the inseparable, and often difficult relationship between environment and development. Drawing from the 1987 report of the World Commission on Environment and Development, the module begins with the symptoms and causes of a threatened future namely, poverty, growth, critical thresholds of our environment and economic using data and named examples. That provides the context to understanding sustainable development by exploring the concepts of needs and limitations at different scales. The theme of sustainable development would then be examined through the issue of climate change. The module focuses on the natural and anthropogenic causes of climate change and its effects on people and the environment, specifically in the areas of weather hazards and pollution. Students tap into, and build upon their prior knowledge of weather and climate with just-in-time inclusion of content concerning climatic variations such as Earth's energy budget, atmospheric circulation, and El-Nino Southern Oscillation, etc.. Varied responses and mitigation measures planned and implemented in developed and developing countries would be discussed. It would be apparent that there are no straightforward cookie-cutter solutions for the issues and challenges arising, and countries would need to participate and cooperate with commitment at the global, regional and national levels to reduce and manage the impacts of climate change.	4	None			3	
4	1	HY4131	Core (Major)	History Insights I	This module traces the birth of the ideas on peace in post-WWII and the collective security role of the United Nations (UN). It also examines and discusses the role and contribution of the UN in these areas: international law, particularly with regard to human rights covenant and law on genocide; and the social and economic role of the UN with regard to the environment and population.  A. Purpose and Formation of the United Nations 1. Origin of the UN: reasons for the founding , its aims and principles  B. Political effectiveness of the UN in maintaining international peace and security 1. Organisational structure : Main organs of the UN and the UN Secretary-General 2. Collective security role of the UN : peacekeeping, peace enforcement, peacemaking and peacebuilding 3. ICJ and ECOSOC	4	None			3	

					C. UN Reforms 1. Success and limitations of the UN						
4	2	HY4132	Core (Major)	History Insights II	<p>This module examines the contemporary issues of the post-Cold War era which includes perspectives on the new challenges facing the United States and in its relations with other countries, particularly Russia, and strategic alliances such as with NATO. It also also examines the resurgence of new forces in the East with the growth and transformation of the Asian economies, particularly Japan, China and India.</p> <p>A. End of Bipolarity 1. Historical debates on end of the Cold War</p> <p>B. US Role in the post-Cold War political effectiveness of the UN in maintaining 1. US foreign policy in the immediate post-Cold War I 2. US-Russian relations and security strategies towards Europe; NATO Collective,</p> <p>C. Asia Resurgence and relations with the Major Powers 1. China and Japan's Relations with Major Powers 2. Success and limitations 3. Engaging India in the 21st century</p>	4	None			3	
5	1	EC5131	Core (Major)	Economic Insights III	<p>The module introduces the concepts of market failure and explores the reasons why market fails, and the effectiveness of government's intervention in these markets. Students will be able to critically evaluate market failure and associated policy effectiveness, with particular reference to quasi-public goods and asymmetric information. The concepts of risk, uncertainty and asymmetric information will also be explored.</p> <p>1. Market Failure a. Allocative Efficiency b. Productive Efficiency</p> <p>2. Externalities</p> <p>3. Public Goods</p> <p>4. Imperfect Information a. Merit Goods and Demerit Goods b. Asymmetric Information</p> <p>5. Market Dominance</p> <p>6. Risk and Uncertainty</p>	4	None			3	

5	2	EC5132	Core (Major)	Economic Insights IV	<p>This module equips students with further tools to analyse the macroeconomy. Building upon the knowledge and skills in previous modules, students will examine the various causes of macroeconomic problems and discuss the effectiveness of governments in resolving these problems. The module also introduces the topic of development economics and explores the reasons why some country grow faster than others.</p> <p>1.National Income Equilibrium a.IS-LM b.AE-Y c.AD-AS</p> <p>2.Relationships between Policies</p> <p>3.Development Economics a.Solow-Swan Growth Model</p>	4	None			3	
5	1	GE5131	Core (Major)	Geography Insights III	<p>The module continues with the underlying theme of sustainable development but will be exploring the concepts of needs and limitations in the issues of poverty, work and rapid urbanisation. With reference to the Sustainable Development Goals (SDGs), the module explores the issue of poverty by looking at incomes as well as consumerism and wastage. The issue of poverty ties in closely with employment and employability in different countries, both developing and developed which would also be examined. Using the Human Development Index (HDI), students understand the key economic and social indicators of development, yet at the same time, evaluate the limitations of these indicators in reflecting development in countries. The module would also build on students' prior knowledge of rapid urbanisation as they study the challenges and opportunities concerning water and energy, particularly in the urban landscapes.</p>	4	None			3	
5	2	GE5132	Core (Major)	Geography Insights IV	<p>The module focuses on:</p> <p>1. skills-based learning where students appreciate and are given the opportunities to make use of enabling technologies such as GIS and knowledge and skills learnt in geography to examine, address, represent and communicate the associated geographical phenomena, patterns and distribution;</p> <p>2. Ethical issues with the use of data sources and information (primary, secondary, online sources, powerful and open source technologies like GIS) during the process of data collection, manipulation, representation and communication.</p> <p>1. Definition of GIS</p> <ul style="list-style-type: none"> <li>• What is GIS?</li> <li>o Construct definitions of GIS</li> <li>o Analytical capabilities of GIS</li> <li>o Relevance of GIS</li> </ul>	4	None			3	

				<ul style="list-style-type: none"> <li>• Describe components of GIS <ul style="list-style-type: none"> <li>o Hardware, Software, Input, Output</li> <li>o Suggest enabling technologies, instruments and online resources to address geographical issues</li> </ul> </li> </ul> <p>2. GIS and Maps</p> <ul style="list-style-type: none"> <li>• What are maps? <ul style="list-style-type: none"> <li>o Comparison the purpose and types of maps used for similar focus / themes</li> <li>o Examine Political, Social, Cultural, Economic considerations</li> </ul> </li> <li>• Representation and Cartographic Communication of Map Outputs – Cartographer and Intended Audience <ul style="list-style-type: none"> <li>o Map Representation and Interpretation of geospatial data – Geometric, Attribute, Temporal Data</li> <li>o Base Map Creation with key map elements</li> </ul> </li> </ul> <p>3. Earth and its Coordinate System</p> <ul style="list-style-type: none"> <li>• Map Projection <ul style="list-style-type: none"> <li>o Datum, Latitude, Longitude</li> <li>o Spatial References, Coordinate Systems</li> <li>o Distortions and Preservations</li> <li>o Conformal, Equal-Area, Equal Distance</li> <li>o Conical, Cylindrical, Azimuthal</li> </ul> </li> </ul> <p>4. Principles of Cartography</p> <ul style="list-style-type: none"> <li>• Cartographic Design <ul style="list-style-type: none"> <li>o Key Map Elements</li> <li>o Visual Hierarchy, Contrast, Figure Ground and Balance</li> <li>o Typography, Scale and Generalization</li> <li>o Symbolisation and Colours</li> </ul> </li> </ul> <p>5. Spatial Data and Data Models</p> <ul style="list-style-type: none"> <li>• Vector and Raster Data Models <ul style="list-style-type: none"> <li>o Vector and Raster Data</li> <li>o Advantages and Disadvantages of Vector and Raster Model</li> </ul> </li> </ul> <p>6. ## **Music**

### **Welcome to the NUS High School Music Program**

Music education in the NUS High School aims to refine the aesthetic sensitivities of all humanities. It is our mission to provide a quality music program that is an integral part of the entire education as well as a reflection of a well-balanced education experience. School and community resources are used to facilitate the exploration of music in a manner both meaningful and relevant to students. Students majoring in music—upon recommendation—will also enjoy the collaboration opportunities with higher institutions. The music program will enhance students' learning through the acquisition of

- Music Knowledge and Reading
- Music Listening and Analysis
- Music Composition and Performance

The music program will develop students in achieving these learning competencies and to strive for excellence within the limits of their individual capabilities in three areas: Skill Development, Musical Understanding, and Attitude Development.

### **Expected Requirements**

#### **Applied Instrument:**

Students majoring in Music must try to attain at least a Grade 8 standard of the *Associated Board of Royal School of Music (ABRSM)* or beyond for the first musical instrument and a Grade 5 standard ABRSM for the second instrument by Year 6. Majoring students will study or continue to learn the applied instruments\* with their external music teachers who will prepare them for examination boards such as the ABRSM or *Trinity College London (TCL)*. Each level grows from those experiences previously presented.

*\*Please check with HOD for the approved applied instruments*

#### **Performing Opportunities: Senior Recital and CCA Performing Arts:**

Aside from fulfilling the applied instruments requirement, music majors are also required to:

- present a Senior Recital in Year 6
- participate in one of the CCA Performing Arts group: School Orchestra or Chinese Orchestra or Choir (based on their 1<sup>st</sup> instrument)

We hope to provide music majors the opportunities to explore in and out of school music activities and the study of an orchestra instrument during his or her high school education.

### **Design of Curriculum**

Music curriculum is deliberately made flexible in order to meet the needs of students within a variety of facilities and school timetable structures. Students will gain an introduction to Music in Year 1. They will then have the option of pursuing Music in Years 2 and 3, as well as majoring in Music from Years 4 to 6. Each module represents a minimum of 12-15 weeks of classroom instruction per semester. Each modular credit is equivalent to 50 minutes of the class time. Some of the modules can be self-contained while others are taught in spiral sequence.

Students aiming to choose Music as a 4<sup>th</sup> major may do so by completing **all CORE music modules**. These **CORE Modules** offer students a broad-based exposure and a general overview of the subject so as to increase the students' general musical knowledge, the depth of understanding and appreciation of the subject matter. These modules lay a strong foundation for the fundamental concepts and principles of music. Grades of Year 3 to 6 Core modules are counted toward the Cumulative Average Point (CAP).

We acknowledge that

1. the individual students will not necessarily be practitioners of the arts, few may choose it as a career,
2. still more may pursue it as an avocation, and
3. most of the students will be the mass audience for the culture of their times.

However, we want to foster in our students the appreciation and understanding of the arts so to allow them a lifelong source of enjoyment.

### **Assessment**

The music program will explore various modes of assessment: **Authentic** (skill demonstration, performance-based and task-oriented); **Formative** (For learning: what new insights have students brought to their music making during this lesson or unit of work—carried out throughout a course or project—process); and **Summative** (Of learning—record the overall achievement of a student—end of a course or project—measures learning outcomes).

The assessment ranges from individual practical examinations to submitted projects and presentations—with emphasis on authentic assessments. Each module carries its own specific Continual Assessment (70%) requirement such as Quizzes/Tests, Assignment (in theory or in practical aspects), Projects, Concert Reports; and a Final Examination or Project (30%) or entirely 100% Continual Assessment.

Students experience both the reflective preparations and drafting and revision of work. At the other extreme, aside from learning to improvise, sight-read/sing, and generally 'think on their feet,' students are strongly encouraged to be assessed by external examination boards such as the ABRSM or Trinity for benchmarking purposes.

### **Learning Outcomes**

The Music & Art Department promotes and cultivates awareness and appreciation through the Aesthetic Appreciation Program, nurtures passionate students through curriculum and department activities that contribute to the total development of the individual. This development enhances also the 21st century competencies and the MOE's Desired Outcomes (*Confident Person, Self-Directed Learner, Active Contributor, Concerned Citizen*). School and community resources are used to facilitate the exploration of music and art in a manner both meaningful and relevant to students. Majoring students would have attained the skills and knowledge that will prepare them for tertiary level education and beyond.

When students can relate and apply their **knowledge and ideas**, and are able to, **associate, apply, analyze** and **synthesize** through the learning processes for themselves, they are equipped with skills and competencies which will allow for lifelong learning to occur. In short, students will experience satisfying and valuable means to explore and develop their composite talents and abilities.

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1 or 2	MU1131	Core	Foundations in Music	This module introduces music in context with the world/environment we live in. Students will discover that music can be much more connected to subjects such as Math and Science. Students will get to create and perform music in both vocal and instrumental (percussion) settings, listen and respond to music of different temperaments. This inter-disciplinary approach seeks to re-visit the once natural coexistence of the subjects and uncover the similarities between them. The module also aims to provide a process-oriented and interactive platform for inquisition and play. By the end of the semester, they would have developed and cultivated aesthetic values in music so to allow lifelong learners.	2	Good Attitude and Open Mindset			2	
2	1	MU2131	Core	Basic Musicianship I	This module is a fun and yet challenging course for all students with or without music background to understand and grasp the essential elements of music. It will develop students' sense of musical values as well as the necessary skills for effective musical expression—from basic ear-training and sight-singing to conducting, exploring music notation, duration, harmony, terms and signs; as well as writing simple melodies and to group performance.	2	MU1131			2	
2	2	MU2132	Core	Basic Musicianship II	This module is a fun and yet challenging course for all students with or without music background to understand music through listening, composing and group performance. Students will also experience through a heightened appreciation of the musical heritage of Singapore, Japan, China, India, Indonesia, western music and its offshoots to today's music—the varied musics of popular music.	2	MU2131			2	
3	1	MU3131	Core	Music: The Extravagant Art	This module will look into a tighter and more logical aspect of listening and appreciation — through the various eras and genres (symphony, opera, chamber, concertos, and other forms of music today) — relating them to the arts, society and nationalities. This course will also introduce the contents of various works and their aesthetic qualities: what goes on in the music and how it affects us. Listening to music itself is an art and good listening constitutes an active and creative experience. The highly sensuous pleasure we experience while listening to music is our emotional reward for an intellectual effort well made.  By the end of the semester, the student would be able to LISTEN intelligently with a purpose and an increased aural awareness of musical sounds. They will also be able to describe and explain the organization and expression of musical styles; make comparison to a given type of music.	3	MU2132			3	
3	2	MU3132*	Core	Elements of Music Theory	This module spirals to the next level of music theory for students who have already attained ABRSM Grade 3 / 4 Music Theory or have completed Basic Musicianship. It covers the basic form and analysis of	3	MU3131			3	

					music, various clefs, irregular time signatures, usage of triads and chords in harmonization, basic compositional devices, ornaments, instruments of the orchestra, transposition and arrangement, etc. All students (without the earned certificate) must sit for the external examination: ABRSM Grade 5 Music Theory.						
4	1	MU4131	Core (Major)	Ear-Training & Sight Singing	This module challenges students to the task of ear-training and sight-singing exercises designed to build up an increased aural/oral awareness of musical sounds and pitching. The exercises consist of study and practice in melodic (2–3 parts), harmonic (2–4 parts) and rhythmic (simple to irregular) drills and dictations, identifying intervals (simple to compound), types of scales (e.g. modes, chromatics blues scales), triads and chords, keyboard harmony, score reading in various clefs (treble, alto, tenor, bass), conducting skills—ALL within a tonal/atonal context, error detection, prepared/unprepared singing and dictation. By the end of the semester, students will be required to sing as an ensemble in various parts.	4	MU3132			3	Refer to criteria checklist for eligibility to major
4	2	MU4132	Core (Major)	Chamber Music	Chamber Music is defined as music for small ensembles, one performer to a part, generally without a conductor. In the past, the term chamber music was restricted to Western classical music for small ensembles, such as the string quartet or piano quintet. However in NUS High School, chamber music may comprise of different musical styles and mix of available instrumentations and skills. At the heart of this art form is a spirit of collaboration. Democratic in essence, chamber music demands that each individual engage in a close musical dialogue with the other performers. Their collective musical instinct, experience, knowledge, and talent guide the process of interpreting, rehearsing, and performing. Students are required to present a performance - consisting of instrumental playing and singing (optional acting and dancing) - by end of the Semester.	4	MU4131			3	
5	1	MU5131	Core (Major)	Melody & Harmony	This module deals with tonal organization in the music of the 18th and 19th centuries, offers a thorough and comprehensive course of study in harmony, figured bass, forms and analysis, melodic decorations, suspension, writing for orchestral instruments, modulation, suspension, diatonic secondary 7th chords, Neapolitan 6th chord, Diminished 7th, Augmented 6th, advanced studies in four-parts, modulation, instrumental styles writing, harmonizing a melody, rewriting chorale passage and sonata, continuation of melodic writing for 2 treble instruments and a basso continuo, identification of compositions, its different genres and styles etc. Majoring students without the certificate must sit for the external examination: ABRSM Grade 8 Music Theory.	4	MU4132			3	Students must have attained a certificate of ABRSM Grade 5 Music Theory. (Merit & above)
5	2	MU5132	Core (Major)	Orchestration & Music Composition	This module looks into the principles of composition and instrumentations; and aims to develop student's inventive ability with guided writings in various forms of musical composition. Two parts: (1) Instrumentation deals with the ranges, techniques, and timbres of each of the orchestra instruments; (2) Orchestration deals with major scoring	4	MU5131			3	Students must have attained a certificate of ABRSM Grade 8 Music Theory.

					problems as well as techniques of transcribing piano, chamber, band music for orchestra, and explores the ranges and transpositions of voices. Students will work on these characteristics and basic techniques in arranging, transcribing and scoring for chorus, orchestra, band and ensembles from pre-existing scores to original compositions. Students will be equipped with music technology skills where they learn music notation software (Finale) and basic knowledge of MIDI sequencing (garage band) to create and compose music.						
6	1	MU6131	Core (Major)	Performance Practice	<p>Performing Practice is about the performance of music—stylistically* and technical aspects –of how the music should be performed in corresponding to the eras (Baroque, Classical, Romantic, Contemporary). This module looks not only the performance styles but also into the notated/written scores - techniques of embellishments &amp; ornamentations; tradition &amp; philosophy, cultural perspectives – which values respect and represents our culturally diverse population. The module also focuses on the fundamental issues that will affect the teaching and learning of music - functions of music education to its social, psychological and pedagogical aspects. More practical topics discussed are cultural pluralism, innovative approaches in teaching &amp; learning and critical thinking. Students are required to submit a research paper on a topic of their choice (a proposal of no more than 500 words must be submitted for approval) which draws from areas of study such as analytical studies of various perspectives and approaches through representative recordings of literature and multimedia to performance or composition studies.</p> <p>*Stylistic interpretation of the repertoires will be at your external music teacher's discretion. This is to avoid any conflicting views</p>	4	MU5132			3	
6	2	MU6132	Core (Major)	Senior Recital	<p>Music performance is an integral part of every student's music education. As such, students specializing in music are required to perform a full recital of 60 minutes in the final year of NUS High music education: primary instrument (35-40 minutes) and secondary instrument (10-15 minutes). Students are to adhere to the recital guidelines. Prior to the recital, majoring students are to fulfil the followings: attained a minimum standard of ABRSM Grade 8 for the first musical instrument and a minimum standard of ABRSM Grade 5 for the second instrument; participated in a music competition – be it ensemble/ solo (if opportunity); played for at least one master-class; presented at least 2 mini-performances for experience (solo or joined and a lecture recital); and passed the jury at least two weeks prior to recital.</p> <p>Majoring students are required to check with the Department Head on the procedures and bookings, recital repertoires; and the after recital reception (optional) with their parents.</p>	4	MU6131			3	Students must have attained a minimum standard of ABRSM Grade 8 or equivalent for the 1st musical instrument and ABRSM Grade 5 or equivalent for the 2nd instrument.

# Art

## Welcome to the NUS High School Art Program

The Art program in NUS High School aims to cultivate the student's interest and curiosity in fields of art study. Students can put into practice what they have learnt in the Math and Science modules to enhance their holistic learning within the art classroom: Geometry in perspective drawing, Chemistry in ceramics, Physics in sculpture, Biology in figure drawing and environmental sculptures, Psychology in interactive art and computer technology in new media arts. Art can also be used as a neutral ground when talking about social or controversial subjects. The program will enhance students' learning through:

- **Aesthetic Perception:** Students will learn to perceive the aesthetic value in nature and will be able to articulate with a language specific to the visual arts in their immediate surroundings.
- **Artistic Expression:** Through the process of art making, students will learn to express themselves and the art of visual communication through various forms.
- **Historical and Cultural Context:** Students will understand historic contributions and cultural context in the visual arts. They will analyze the role of visual art in the development of human cultures all around the world.
- **Critical Analysis:** Students will learn to analyze aesthetic principles and verbalize their understanding of the issues through constructive criticism of other students' work.
- **Practical Applications:** Students will apply creative skills in problem solving, communication and organization of resources and time. They will also learn aesthetic appreciation, expression through visual language and will experience first-hand the process of cross-disciplinary interaction. These abilities will help students understand how the arts are applied in everyday life and what careers are related to the visual arts.

## Four Aspects of Visual Arts Education

- **2 Dimensional (2D) studies:** include Drawing, Painting, Printmaking, Photography, Textiles, Collage and Illustration
- **3 Dimensional (3D) studies:** Sculpture, Ceramics, Multi-media work and Installation Art.
- **Design:** Fashion Design, Jewelry Design, Product Design, Interior and Furniture Design.
- **Art History:** infused into the 2D, 3D and Design modules. It aims to cultivate the understanding and knowledge of architecture, sculpture, painting, and other art forms within diverse historical and cultural contexts.

Students will gain an introduction to Art in Year 1. They will then have the option of pursuing Art in Years 2 and 3, as well as majoring in Art from Years 4 to 6. Students aiming to choose Art as a 4th major may do so by completing all CORE art modules. These CORE modules offer students a broad-based exposure and a general overview of the subject so as to increase the students' general musical knowledge, the depth of understanding and appreciation of the subject matter. These modules lay a strong foundation and the fundamental concepts and principles of the subject. Core module grades are counted toward the Cumulative Average Point (CAP).

## Expected Requirements

Majoring students are required to

1. submit for AP Studio Art (2D-Design or Drawing portfolio)
2. present an Art Grad Show by Year 6
3. join Media Club – photo/AV (if that's their strength and Medium for Art) or one of the performing arts and/or Music & Art Ambassadors (objective is to ensure Team Collaboration).

Students aiming to choose Art as a 4th major may do so by completing all CORE art modules. These CORE modules offer students a broad-based exposure and a general overview of the subject. Core module grades are counted toward the Cumulative Average Point (CAP). Majoring students will work on building a portfolio in one of two portfolio areas: 2-D Design or Drawing. Students will have to consult the subject teacher to decide on a suitable area to focus on. The portfolio should reflect three areas of concern: (1) a sense of quality in a student's work; (2) the student's concentration on a particular visual interest or problem; (3) the student's need for breadth of experience in the formal, technical, and expressive means of the artist. Students majoring in Art will be equipped with the skills and knowledge to submit an AP Studio Art Portfolio in Year 6 of their studies.

## Learning Outcomes

The Music & Art Department promotes and cultivates awareness and appreciation through the Aesthetic Appreciation Program, nurtures passionate students through curriculum and department activities that contribute to the total development of the individual. This development enhances also the 21st century competencies and the MOE's Desired Outcomes (*Confident Person, Self-Directed Learner, Active Contributor, Concerned Citizen*). School and community resources are used to facilitate the exploration of music and art in a manner both meaningful and relevant to students. Majoring students would have attained the skills and knowledge that will prepare them for tertiary level education and beyond.

When students can relate and apply their **knowledge and ideas**, and are able to, **associate**, **apply**, **analyze** and **synthesize** through the learning processes for themselves, they are equipped with skills and competencies which will allow for lifelong learning to occur. In short, students will experience satisfying and valuable means to explore and develop their composite talents and abilities.

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1 or 2	AR1131	Core	Foundations in Art I	Foundations in Art I introduce art in context with the world/environment we live in. Students will discover that art can be much more connected to the other subjects such as Math and Science. This inter-disciplinary approach seeks to re-visit the once natural coexistence of the subjects and uncover the similarities between them. The module also aims to provide a process-oriented and interactive platform for inquisition and play. Students will learn some relevant/significant art terms and art history that supports the understanding of the module.	2	Good Attitude and Open Mindset			2	
2	1	AR2131	Core	Foundations in Art IIA	Foundations in Art IIA introduce art fundamentals in theory and practice. Students will learn the elements of 2D art in relation to the history of their uses. They will equip themselves with essential terminology that will facilitate the description in art appreciation. Students will also uncover these 'fun'damentals in the practice of art through 2D renditions. They will explore the varied basic parts that form an art work using different mediums. The module will provide students with an environment for inquiry, imagination and self-expression through, discussion and art making.	2	AR1131			2	
2	2	AR2132	Core	Foundations in Art IIB	Foundations in Art IIB continue to introduce art fundamentals in theory and practice. Students will learn the principles of 2D art in relation to the history of their uses. They will equip themselves with essential terminology that will facilitate the description in art appreciation. Students will also uncover these 'fun'damentals in the practice of art through 2D renditions. They will explore into the varied basic parts that form an art work using different mediums. The module will provide students with an environment for inquiry, imagination and self-expression through, discussion and art making.	2	AR2131			2	
3	1	AR3131	Core	Art Intermediate I	In this intermediate module, students will continue the practice of art & design through drawing and painting. They will continue to develop their skills in these areas and begin to explore mixed media. Students will be challenged in the faculties of representations and conception. Relevant art history, movements and theories will be introduced to challenge perceptions. Students will begin to build a portfolio based on their practice and explorations in this module. The module will provide students with an environment for problem solving, critical analysis and art making. It will also provide them with communication and discussion through using Feldman's art criticism model DAIE (Describe, Analyze, Interpret and Evaluate).	3	AR2132			3	
3	2	AR3132	Core	Art Intermediate II	In this intermediate module, students will continue the practice of art through 2D and partial 3D techniques. Students will be challenged in the faculties of representations and conception. Relevant art history, movements and theories will be introduced to challenge perceptions. The module will provide students with an environment for problem solving, critical analysis and art making. It will also provide them with communication and discussion using Feldman's art criticism model DAIE (Describe, Analyze, Interpret and Evaluate).	3	AR3131			3	
4	1	AR4131	Core (Major)	Art Advanced I	This module continues to teach students advanced skills in drawing, painting, and mixed media. In-depth techniques with pencil, ink, acrylic, and others will be conducted with first hand or documented observations. Specific art history topics	4	AR3132			3	Refer to criteria checklist for

					will be introduced through the fourth aspects of Feldman’s criticism model DAIE (Evaluation). Students continue to learn more terms on the Elements of Art & Design (EOAD) and Principles of Art & Design (POAD). Students will continue to see a project through the drawing board to its final product. Skills in creative thinking as well as practical applications of art and design will be put to use. Students will work on 2D portfolio for AP Studio Art from this course.						eligibility to major
4	2	AR4132	Core (Major)	Art Advanced II	Students in this module will be trained to draw, paint and construct in mixed media. Students will be challenged to demonstrate their understanding of art and design principles as they relate them to the elements of art and design. Critical to the portfolio, students will also learn the presentation aspect of works for documentation and viewing. Relevant art history, movements and theories will be discussed in depth through the fourth aspect (evaluation) of Feldman’s criticism model DAIE (Description, Analysis, Interpretation and Evaluation). Majoring students will gain confidence in furthering their portfolio for AP Studio Art from this course. Students are also required to organize their choice artworks for a group showcase. Students have to conceptualize and execute the presentation within an appropriate and creative context so that the various approaches in their artworks will interact well and create the right dynamics in the exhibition.	4	AR4131			3	
5	1	AR5131	Core (Major)	Studio Art I	Studio Art I is designed for highly motivated students seriously interested in art-making. There will not be a written exam; instead, students submit portfolios for evaluation at the end of the school year in preparation for Studio Art. Students will work on building a portfolio in one of two portfolio areas: 2-D Design OR Drawing. Students will have to consult the Teacher-in-Charge to decide on a suitable area to focus on. The portfolio should reflect three areas of concern: (1) a sense of quality in a student’s work; (2) the student’s concentration on a particular visual interest or problem; (3) the student’s need for breadth of experience in the formal, technical, and expressive means of the artist. This course will also introduce students to the art-making approaches of western art from the 18th Century to Postmodernism. The Studio component will be supported by a theoretical framework covering Realism, Formalism, Expressionism, Contextualism & Postmodernism tracing the phenomenal evolution of the visual image and its ideas. Students will begin to understand the transition of the role of art as recorder of history to being the grounds of expression to pluralism.	4	AR4132			3	
5	2	AR5132	Core (Major)	Studio Art II	Studio Art II is a continuation of Studio Art I. This course is designed for students who are seriously interested in the practical experience of art. There will not be a written exam; instead, students submit portfolios for evaluation at the end of the school year in preparation for Studio Art. Students will work on building a portfolio in one of two portfolio areas: 2-D Design and Drawing. Students will have to consult the Teacher-in-charge to decide on a suitable area to focus on. The portfolio should reflect three areas of concern: (1) a sense of quality in a student’s work; (2) the student’s concentration on a particular visual interest or problem; (3) the student’s need for breadth of experience in the formal, technical, and expressive means of the artist. The Studio component will be supported by a theoretical framework of dominant aesthetic theories, visual culture and art. Students may explore processes	4	AR5131			3	

					and practices of postmodern strategies used by artists and relate them to their own motivations and ideas in their studio practice.						
6	1	AR6131	Core (Major)	Studio Art III	Studio Art III is a continuation of Studio Art II. There will not be a written exam; instead, students prepare and submit portfolios (to an external examination board) for Studio Art in one of 2 portfolio areas: 2-D Design and Drawing. Students will have to consult the Teacher-in-charge to decide on a suitable area to focus on. The portfolio should reflect three areas of concern: (1) a sense of quality in a student's work; (2) the student's concentration on a particular visual interest or problem; (3) the student's need for breadth of experience in the formal, technical, and expressive means of the artist. Relevant aesthetic & critical theories for contextual studies will be incorporated into the module to support the Studio component in order to allow students to understand & locate their art-making process within a wider historical and cultural context. Students are required to write a research on topic of their choice, relating to art matters.	4	AR5132				3
6	2	AR6132	Core (Major)	Art Grad Show	The Art Graduation Show module is a compulsory requirement for the Year 6 art majors. In this module, the student-artists will go through a rigorous process of planning, conceptualizing and presenting a show that is a culmination of their artistic learning journey at NUS High School. The Graduation Show module is created as an authentic learning experience for the student-artists and thus form an integral part of their art education. The best of each student's past and current artworks will be designated an individual space for a solo presentation. Collectively and thematically, the students will exhibit either in the school premise or an external venue. Close mentorship and supervision will be given by the art teacher-in-charge and HOD to students to guide them in curating, budgeting and executing the show.	4	AR6131				3

## **Da Vinci**

The Da Vinci Programme is one of the keystone programmes in NUS High School and it complements the curriculum to develop the scientific minds of our students. The 6-year programme aims to develop skills for research, innovation and enterprise in multiple disciplines. Students undergo a series of structured programmes in the first four years in order to prepare them to carry out a research project in their senior years.

The Da Vinci programme will nurture students' appreciation and understanding of the multi- and inter-disciplinary nature of knowledge and research so that they can be polymaths in this fast-changing world. We strive to help students stay at the frontier of research and innovation. We want to inculcate the observation, communication and thinking skills vital for research and innovation.

NUS High School is fortunate to have many organizations supporting the Da Vinci programme. In particular, many schools and faculties in NUS provide research opportunities for our students through expert guidance and mentorship. Our key partners include Science Centre Singapore, DSO National Laboratories, Defence Science and Technology Agency (DSTA), the Agency for Science, Technology and Research (A\*STAR) and the Nanyang Technological University.

All students will present their research at our annual NUS High School Research Congress. They are also encouraged to interact with their peers locally and internationally; and to exchange ideas through oral and poster presentations at local and overseas science fairs and conferences.

**All Da Vinci Programme Modules will be awarded *Distinction, Merit, Pass or Unclassified* according to performance (no Grade Points are given).**

Level	Sem	Module Code	Module Type	Module Title	Description	Modular Credits (MC)	Pre-requisites	Preclusions	Co-requisites	Hrs/wk	Remarks
1	1	DV1131	Core	Da Vinci Foundation	This semester-long module aims to inculcate essential habits of the scientific mind; and to develop the competencies, skills and ethics for research, innovation and enterprise. We aim to have students thinking creatively and solving problems innovatively in order for them to have a sense of excitement for the future. The programme will equip students with a basic set of idea generation tools, and introduce the technical skills needed to execute their ideas. Students will also be brought on fieldtrips to widen their perspective. Another focus will be to encourage interdisciplinary thinking. Much innovation and excitement can be found at the boundaries between traditional subject silos. Activities will provide students with a broad perspective of the multi- and inter-disciplinary nature of things in the real world.	0	None			3	
2	2	DV2134	Core	Junior Maker	In this module, students will learn to code and control hardware using an Arduino board. In this way, they will be introduced to the basics of using the inputs from sensors and other devices to control output devices to achieve a given objective. Students will get a rich hands-on experience and will need to complete a simple project.	0	None			3	
2	2	DV2135	Core	Junior Science Research	In this module, students will be taught the scientific method, its merits and limitations and how to systematically make enquiry into science. Students will propose a research topic of their own choice which will be reviewed and approved by their teachers. They will design, structure and carry out the project in small teams and deliver a report and presentation at the end of their project.	0	None			3	
2	2	DV2136	Core	Junior Math Research	In this module, students will be taught mathematics problem-solving skills and how to apply them in a mathematics project. Students are also taught the use of LaTeX to produce professional looking reports. Students will propose a research topic of their own choice which will be reviewed and approved by their teachers. They will design, structure and carry out the project in small teams and deliver a report and presentation at the end of their project.	0	None			3	
3	2	DV3232	Elective	Innovation and Enterprise	This module will focus on the conceptualisation, design and development of technology orientated products and services. Students will learn about innovation, design thinking, and marketing. Students will have to work in groups to identify a problem, identify customer needs, establish product/service specifications, then design, plan and prototype a product. Students will need to be able to work in teams, be comfortable with presentations, and have a strong interest in design and innovation. There can also be guest lectures by entrepreneurs and founders of various start-ups. The module will also cover intellectual property and financial analysis.	0	None			1.5	
3	1 or 2†	DV3131	Core	Research Methodology	Research is an integral component of science and mathematics. It is the vehicle for the advancement of these disciplines, both past and present. Thus, having a good understanding of various components of research and possessing good research skills will put one in a good stead for a career in math and science. In this module, we aim to introduce the basic framework which scientists and	0	None			3	† Students will take DV3131 either in Semester 1 or 2.

					mathematicians follow to conduct their research work, i.e. the principles behind elucidating valid research findings, as well as the processes, skills and ethics needed to conduct, evaluate and communicate research well.						
4	1 and 2	IRP	Elective	Independent Research Project	During the Foundation and Advancement Years, students who have the aptitude and passion for research in any field can embark on the Independent Research Project (IRP) as an individual or in a team. These projects may also be linked to external programmes like the Science Mentorship Programme, Nanyang Research Programme, the Young Defence Scientists' Programme and the National Weather Study Project. Students can also partner an external research organization for their project.	0	DV3131			0	*Research Projects are not assigned a module code but will be reflected in the student's research transcript
1 or 2	1 or 2	DV2131	Core	Design & Engineering	This semester-long module aims to give students the intermediate skills they need to turn their ideas into reality. This module will build on the skills taught in DV1101. Students will learn to work with wood and plastics, as well as basic electronics. They will also be introduced to computer-aided design software	0	None			2	Students will take either DV2101 or DV2103 in Year 1 Sem 2 or Year 2 Sem 1
1 or 2	1 or 2	DV2132	Core	Creative Problem Solving	Problem solving is applied thinking, an integral part of all learning for students today. This semester-long programme is a platform where students, working in teams, learn to apply a wide range of techniques to generate creative solutions to existing or future problems contained within complex social contexts. Besides equipping students with the skills and strategies of solving problems, basic research skills and oral presentations skills will be highlighted as well. One of the frameworks used will be that of the Future Problem Solving Programme (FPSP), a cohesive and sequential process that emphasizes teamwork and ethical thinking in anticipating future challenges.	0	None			2	
1 or 2	1 or 2	DV2133	Core	Science Presentations	Scientists, engineers and mathematicians need specific presentation skills. It is essential that scientists are able to communicate effectively with each other as well as with the general public. This module will aim to allow students to acquire basic scientific presentation skills and practise them on their peers. By listening to each other's presentations, students will get exposed to a variety of presentation skills as well as get to learn interesting facts from each other. Students will also be encouraged to ask and think about critical questions pertaining to the research process.	0	None			2	Students will take either DV2101 or DV2103 in Year 1 Sem 2 or Year 2 Sem 1
3 or 4	1	DV3231	Elective	Advanced Design and Engineering	This elective module aims to extend students' understanding of the engineering design process through the application of math, science, and technology to create devices and systems that meet human needs. Students will learn about engineering through realistic, hands-on problem-solving experiences. This module will teach advanced skills that will enable the student to design and implement customized automation and data acquisition solutions to meet research and engineering goals.	0	DV2131			1.5	
5 and 6	1 and 2	ARP	Core	Advanced Research Project	During the Specialization Years, all students must embark on their Advanced Research Projects (ARPs) in the field of mathematics, science or engineering. Successful completion of the ARP is one of the graduation requirements for our	0	DV3131			0	*Research Projects are not assigned a module code but

					students. Students can do their ARPs as individuals or in teams of not more than three members.						will be reflected in the student's research transcript
--	--	--	--	--	-------------------------------------------------------------------------------------------------	--	--	--	--	--	--------------------------------------------------------

-----END-----
